Human Factors and Design Yuri Spirochkin, 2023-02-27 This book describes various manifestations of human factors when interacting with potentially dangerous technical systems airplanes launch vehicles and spaceships nuclear power plants energy saturated ground vehicles and infrastructure facilities The idea of the book arose from the desire to find a

common ground between industries that are important for safety Their similarity lies in addition to the technological advancement of products and solutions in equally high safety requirements in particular taking into account the influence of human factor Thus it is of relevance to analyze an impact of human factor in the context of safety The matter is rather complex on the one hand humans manage technical systems on the other hand human errors negligence or evil intentions can turn the system into a threat with disastrous consequences However human interaction with any technical system begins earlier in the design stage In this stage designer being creator of the system must ensure a safe operation and take into consideration possible risks including those caused by human factors itself The book is interdisciplinary in nature and intended mainly for designers of technical systems aiming to assist the specialists in understanding the issues of human participation in life cycle of these systems The examples given are intended to benefit from experiences of not one but a number of industries

Aviation in the Digital Age Ruwantissa Abeyratne, 2020-06-25 All of the topics discussed in this book from sovereignty to cybercrime and from drones to the identification of passengers so are air traffic services and aeronautical communications All of these aviation related aspects are addressed in a 75 year old treaty called the Chicago Convention and its Annexes which as this book argues needs to be reviewed with a focus on its relevance and applicability in connection with Moore s Law which posits that transistors in computer microchips double in speed power and performance every two years while the cost of computers is halved during the same period Firstly in terms of traditional territorial sovereignty we have arrived at a point where there is a concept of data sovereignty and ownership that raises issues of privacy Data transmission becomes ambivalent in terms of territorial sovereignty and the Westphalian model may not be the perfect answer Whether it be the manufacture of airplanes the

transfer of data on individuals or the transmission of aeronautical and telecommunications information all have to be carried out in accordance with the same fundamental principle duty of care Against the backdrop of the relevant provisions of the Chicago Convention and its Annexes the detailed analysis presented here covers key areas such as megatrends AI and international law in the digital age blockchain and aviation drones aviation and telecommunications aviation and the Internet cybersecurity and digital identification of passengers privacy In turn the book suggests how we can best manage this transition
