Electroconvulsive Therapy Richard Abrams, 2002-06-27 In this fully revised fourth edition of what has long been the standard textbook for the field Dr Richard Abrams once again demonstrates his unique ability to analyze and present a wealth of new and often technical material in a lucid compelling and highly readable fashion Hundreds of new clinical studies called from the more than 1500 published since the third edition appeared have been analyzed in depth and incorporated throughout the book An important new chapter has been added on Transcranial Magnetic Stimulation TMS therapy a treatment for depression that is widely used in Europe and expected to become available soon for clinical use in the United States Dr Abrams exposes the scientific flaws in several widely cited reports while focusing on the few carefully controlled studies that provide solid support for the results claimed The sections on the electrical stimulus seizure introduction seizure

quality and treatment electrode placement have been completely revised and updated with new information on those clinical and technical issues that are presently of greatest concern to practitioners and researchers A comprehensive critical assessment of the nature of the seizure threshold and the validity of the stimulus titration method for ECT dosing is presented for the first time with conclusions and recommendations that many will find surprising The continued controversy over the relative efficacies of unilateral and bitemporal ECT is revisited in light of the latest dosing strategies and treatment outcomes reported and of the latest results obtained with bifrontal ECT The potential clinical and theoretical advantages of the recently rediscovered technique of ultrabrief pulse therapy are explained in detail The chapter on the memory and cognitive consequences of ECT has been expanded to focus on the subjective memory effects of treatment with new analysis of the possible biological basis for the improvement in subjective memory so often reported Recently published claims of persistent or permanent memory effects of ECT are refuted in detail In full accordance with the American Psychiatric Association's new guidelines for the practice of ECT Dr Abrams book remains the essential practical guide and reference work for all those who prescribe perform or assist with ECT or are interested in learning more about the subject

Electroconvulsive Therapy Richard Abrams, Walter B. Essman, 1982 Electroconvulsive and Neuromodulation Therapies Conrad M. Swartz, 2009-03-02 Electroconvulsive therapy ECT is a psychiatric treatment involving the induction of a seizure through the transmission of electricity in the brain Because of exploitation movies and greatly heightened drug company promotional activities ECT was used less frequently in the 1980s and 1990s Eventually these movies were understood as unrealistic Now these drugs are increasingly recognized as dangers to body health Because of recent refinements and a far better scientific understanding of the clinical procedures and mechanisms underpinning ECT this treatment modality has seen a resurgence in use and widespread appreciation of its safety This book is the new definitive reference on electroconvulsive and neuromodulation therapies It comprehensively covers the scientific basis and clinical practice of ECT as well as comparisons between ECT and medication therapies including the new generation of antipsychotic drugs It also provides readers with administrative perspectives and specific details for the management of this modality in clinical practice The new forms of nonconvulsive electrical and magnetic brain stimulation therapy are also covered in detail in a separate section The chapter authors are leading scholars and clinicians **Anaesthesia For Electroconvulsive**

Therapy, 2017 Background and Goal of Study Modified electroconvulsive therapy ECT is an effective treatment for some psychiatric disorders and it is used globally There is no standardized guidelines about anaesthesia for ECT and the European research in this area is scarce 1The purpose of this study was to analyse the ECT sessions over a two year period at a Portuguese hospital and determine procedural complications and predictors associated with them Materials and Methods We retrospectively reviewed clinical records of all patients submitted to ECT from January 2015 to December 2016 at Postoperative Anaesthesia Care Unit PACU at our hospital Information collected was about demographics data comorbidities

ASA status ECT data length of stay in PACU medications administered complications and their management Descriptive statistics were performed and comparisons were made using chi square test T test and Mann Whitney U test Statistical significance was defined as p < 0.05
