Basics of Marine and Estuarine Ecology Abhijit Mitra, Sufia Zaman, 2016-02-02 The book presents recent research on marine ecology in different parts of the world. It aims to shed light on relevant topics for budding marine ecologists. The blue soup of Planet Earth, which comprises both biotic and abiotic components, is essential to keeping the wheel of civilization running. Four major ecosystem service categories have been identified within this context: namely provisioning services such as water, food, mangrove timber, honey, fish, wax, fuel, wood, fodder, and bioactive compounds from marine and estuarine flora and fauna; regulating services such as the regulation of climate, coastal erosion, coral bleaching, and pollution; cultural services encompassing recreational tourism, spiritual, and other non-material benefits; and supporting services such as nutrient cycling and photosynthesis. These valuable services are obtained from various resources that must be conserved for the sake of humanity. This book presents data for each resource type not just in the form of a simple description but also through case studies that resulted from several research projects and pilot programs carried out in different parts of the world. Statistical tools were also used to critically analyze the influence of relevant hydrological parameters on the biotic community. Advanced research in marine and estuarine ecology is based on the use of sophisticated instruments, sampling, precision statistical tools, etc., which have also been highlighted in the book.

Estuarine Acidification Abhijit Mitra, Sufia Zaman, 2021-08-24 This book provides a cross-sectoral, multi-disciplinary assessment of different problems associated with estuarine acidification, with special thrust on mangrove-dominated Indian Sundarban estuaries. The arms of ocean acidification have extended to coastal and estuarine waters where a wide spectrum of biodiversity thrives with unique adaptation. Extending several ecosystem services, the impact of acidification in these areas is a matter of concern as acidification potentially has more immediate effects on the health of estuaries and inshore regions as well as regional economies. Ground zero data collected for more than three decades have made the book stand on a strong base.

Blue Economy in Indian Sundarbans Abhijit Mitra, Sufia Zaman, Prosenjit Pramanick, 2022-08-28 This book provides a cross-sectoral, multidisciplinary assessment of the major verticals of Blue Economy relevant to the mangrove ecosystem in Indian Sundarbans, which is a deltaic complex at the apex of Bay of Bengal. This book evaluates the feasibility of Blue Economy considering the natural resource base in this mangrove-dominated deltaic complex. Chapter 1 discusses the need of expanding different marine and estuarine-oriented verticals of Blue Economy as the land resources are gradually becoming depleted. Chapter 2 highlights the wide spectrum of biotic and abiotic resources of the Indian Sundarbans, which can serve as the strong foundation of expanding Blue Economy in the region. Chapter 3 highlights several mangrove-based livelihoods that are not only innovative but may present new opportunities to initiate cottage industries. Chapter 4 highlights the threats associated with Blue Economy in Indian Sundarbans, like sea level rise, acidification of water, weather extremes, pollution, over-exploitation of natural resources, etc., along with ground zero environmental data collated over three decades. Chapter 5 offers several solutions to combat the

threats to regional Blue Economy emphasizing both technology and policy based management The book attempts to align the proliferation of different sectors of Blue Economy in the framework of Indian Sundarbans Mangrove Forests in India Abhijit Mitra,2019-06-27 This is the first comprehensive science based primer to highlight the unique ecosystem services provided by mangrove forests and discuss how these services preserve the livelihoods of coastal populations The book presents three decades of real time data on Sundarbans and Bhitarkanika mangroves in India measuring carbon and nitrogen sequestration as well as case studies that demonstrate the utility provided by mangroves for reducing the impact of storms and erosion providing nutrient retention for complex habitats and housing a vast reservoir of plant animal and microbial biodiversity Also addressed is the function of mangroves as natural ecosystems of cultural convergence offering the resources and products necessary for thriving coastal communities The book will be of interest to students academics and researchers in the fields of oceanography marine biology botany climate science ecology and environmental geography as well as consultants and policy makers working in coastal zone management and coastal biodiversity conservation *Climate Resilient Innovative Livelihoods in Indian Sundarban Delta* Abhijit Mitra,Sufia Zaman,Prosenjit Pramanick,2023-09-26 This book covers several innovative alternative livelihoods based on mangrove floral resources with their respective SWOT analysis True mangrove flora and their associates in Indian Sundarbans are noted for their wide spectrum of ecosystem services in which livelihoods of the region are one of the most important components Many alternative mangrove centric livelihoods are in the pipeline of startup However due to difficulty in marketing and lack of clarity over ownership of natural resources the values of the mangrove based products have not been fully realized Natural resources of several categories in Indian Sundarbans like oysters seaweeds medicinal mangrove flora vitamin rich mangrove fruits etc are still lying untapped These untapped resources have been spun with the livelihood sectors of the Sundarban people backed up with sound business models to make the venture sustainable The carbon foot prints associated with each of these livelihoods have been studied in details and steps have been suggested for net zero carbon livelihood programmes along with their sustainability The book provides the readers about several mangrove based cutting edge researches and technologies in the domain of climate resilient livelihood which if implemented can lead to food and economic security of the region **Impact of COVID-19 Lockdown on Environmental Health** Abhijit Mitra,2023-04-05 This book examines the impacts that the COVID 19 lockdown has had on environmental and ecological health with a focus on coastal ecosystems in the Lower Gangetic Delta The book begins with an overview of COVID 19 s spread and impact before and after the lockdown in the focus region then addresses the specific impacts that the lockdown period had and continues to have on air quality marine and estuarine water quality coastal biodiversity and the livelihoods of the region s inhabitants especially those who live below the poverty line The decrease in human activity combined with the complete closure of various sectors including air travel oil and gas drilling and construction has had a pronounced effect on biodiversity and overall environmental health that is yet to be fully realized The

book sheds light on these changes and assesses how biodiversity ambient air quality and ecosystem functioning will progress as COVID 19 remains a threat and the lockdown persists The study will be of interest to researchers government officials and professionals dealing with disaster management environmental science biological science and health Estuarine Pollution in the Lower Gangetic Delta Abhijit Mitra,2018-08-13 This book critically analyzes the water quality in the lower Gangetic delta and examines the environmental conditions and physical processes operating in this rich ecosystem Readers with an interest in environmental science geography oceanography marine biology environmental biology aquatic pollution and ecology will find the research presented here most appealing Readers will discover critical aspects of the chemistry of the estuarine water particularly that of Hooghly and Matla estuaries in the lower stretch of the delta region along with the causes and effects of pollution in and around this region Particular attention is given to the bioaccumulation of conservative pollutants in edible fishes and floral communities thriving in this region Several case studies are also incorporated to highlight the vulnerability of pollution in this region Chapters also address the impacts of climate change specifically acidification on the concentration and behavior of conservative pollutants Finally the book highlights some mitigation measures at the technology and policy level to minimize the negative impacts posed by different groups of pollutants on the estuarine biodiversity **Introduction Marine and Estuarine Ecology** R. Kaiser, Martin J. Attrill, Simon Jennings, 2011 *Introduction to Marine Plankton* Mitra, Abhijit Mitra, Kakoli Banerjee, Avijit Gangopadhyay, 2004 The present book is designed for acquiring a basic knowledge on marine and estuarine phytoplankton and zooplankton which are tiny free floating biotic components of the aquatic ecosystem These drifting biological chips of the aquatic system play an important role in maintaining the global carbon cycle and also in spinning the marine food web It is well known that phytoplankton are the source of fossil fuels and form the foundation stone of world fishery However phytoplankton sometimes causes adverse impact on the marine and estuarine environments Toxic phytoplankton when consumed by shellfish or other species often affect the marine food chain including poisoning of sea birds mammals and even human Recent internet reference <http://oceanlink.island.net/ask/pollution.html> has revealed that phytoplankton into the atmosphere This compound can transform into sulphuric acid and eventually may contribute to acid rain The zooplankton occupy the tier next to phytoplankton in the marine food web and form important linkage between the primary and secondary production of the oceans The present book has focussed on the habitat taxonomy and ecological role played by the planktonic community in the marine and estuarine compartments This book can enrich the knowledge of the students on marine ecosystem the process of sampling preservation and diversity study of planktonic species in the saline environment Some case studies have been given highlighting the diversity of plankton in the northwestern Bay of Bengal Annotated suggested references and internet references have been added at the back of each chapter for those students interested in pursuing further information on this particular branch of environmental science Contents Chapter 1 Marine and Estuarine Plankton An Overview Habitat of marine and estuarine plankton Importance of phytoplankton and zooplankton Chapter 2 Marine and Estuarine Plankton Classification and Types Classification of marine and estuarine phytoplankton Classification of marine and estuarine zooplankton Chapter 3 Sampling and Storing of Plankton Sampling and preservation Computation of ecological indices from the plankton community Chapter 4 Plankton Spectrum of Northwestern Bay of Bengal Common phytoplankton

V. Tait, 1972 The widening interest in marine biology has led to the establishment of an increasing number of school and undergraduate courses in the subject There are many books on various aspects of marine biology which students can read with advantage but few that are suitable as introductory reading at the commencement of studies This book has been compiled primarily as an aid for zoology students at the start of a special course on marine biology The text is an introduction to the author's annual course for undergraduates The aim has been a concise presentation of information and ideas over the general field of marine ecology with guidance on the selection of more advanced reading The sources of further information given at the end of each chapter have been chosen as far as possible from books and journals to which students should have reasonably easy access These lists provide a selection of additional reading which starts at an elementary level and becomes more advanced as the course proceeds Students entering the author's course are usually in their third undergraduate year and a general knowledge of the phyla is therefore assumed

Pdf Basics Marine Estuarine Ecology Abhijit Book Review: Unveiling the Magic of Language

In an electronic digital era where connections and knowledge reign supreme, the enchanting power of language has become more apparent than ever. Its power to stir emotions, provoke thought, and instigate transformation is truly remarkable. This extraordinary book, aptly titled "**Pdf Basics Marine Estuarine Ecology Abhijit**," written by a very acclaimed author, immerses readers in a captivating exploration of the significance of language and its profound impact on our existence. Throughout this critique, we shall delve into the book's central themes, evaluate its unique writing style, and assess its overall influence on its readership.
