

CONJURING PROPERTY

JEREMY M. CAMPBELL

The background of the cover is a solid mustard yellow. A large, irregular, torn-paper-like shape is cut out of the upper half, revealing a photograph of a forest fire. The fire is intense, with bright orange and red flames visible through the dark, silhouetted trees. The smoke is thick and grey, rising into the sky. The overall mood is one of environmental crisis and destruction.

Pdf Conjuring Property Speculation Environmental Brazilian:

Fixing the Climate Charles F. Sabel, David G. Victor, 2024-04-02 Can the world stop climate change The prognosis is bleak Most efforts to tackle the problem have focused on treaties that require virtually global consensus yet meaningful consensus has been elusive because deep cuts in emissions are expensive and antagonize well organized interests Predictably diplomacy has swung between gridlock and superficial agreements with little impact After three decades of sustained negotiations on global warming emissions have risen by one third Stopping climate warming requires that they be cut essentially to zero Sabel and Victor look to offer a case for optimism by proposing a different strategy to recast climate change as a problem best addressed piecemeal Rather than seeking a grand global bargain they argue that the problem should be broken down into local challenges They call this concept experimentalist governance massive simultaneous searches for local solutions that are scalable to the global level with a focus not on marginal incentives for success but on penalties for repeated egregious failure The authors show through a series of cases how regulators firms farms and NGOs faced with penalty defaults are learning to solve some of the knottiest environmental problems they then propose central mechanisms that could help monitor and review progress establishing which experiments are working and establish new frontiers for experimentation While the threat of impending catastrophe has understandably made debate about climate policy increasingly shrill and polarized Sabel and Victor offer here a guide to institutional design that could finally lead to the politically and economically self sustaining reductions in emissions that thirty years of global diplomacy has not delivered

The Carbon Calculation Raquel Rodrigues Machaqueiro, 2023-03-07 The Carbon Calculation examines how climate science the policy world and neoliberalism have mutually informed each other to define the problem of climate change as one of market failure precluding alternatives to market based solutions Focusing on REDD Reducing Emissions from Deforestation and Forest Degradation the book demonstrates how industrialized countries are able to maintain their socioeconomic models largely unaltered while claiming to address global warming using forests in the Global South to offset their pollution By examining the creation and implementation of REDD historically and ethnographically the book traces the social life of this mechanism as it travels across a complex network spanning several interacting levels international national and local Through cases in the Brazilian state of Acre and the Zamb zia province in Mozambique the author demonstrates how global climate policy has created new opportunities and rationales for unprecedented levels of intervention in the Global South all under the guise of saving the planet The Carbon Calculation critically highlights the ways in which politics has reinforced a scientific focus on one possible solution to the problem of climate change namely those that largely absolve the industrialized world from undertaking politically painful transformations in its own economic model **Frontiers of Development in the Amazon** Antonio Augusto Rossotto Ioris, Rafael R.
