Regulation of Ca²⁺-ATPases, V-ATPases and F-ATPases Sajal Chakraborti, Naranjan S Dhalla, 2015-12-10 The biological membranes of cellular organization enfold an important group of membrane proteins called the ATPases which are not only versatile in maintaining chemical gradient and electrical potential across the membrane but also bring metabolites necessary for cell metabolism and drive out toxins waste products and solutes that otherwise can curb cell functions ATPases are distributed virtually in all live forms starting from unicellular to multicellular and also in viruses There are different types of ATPases which differ in function and structure and in the type of ions they transport The three main types of the ion pump ATPase family are i P type ATPases that transport different ions across membranes and Ca²⁺ ATPases belongs to this category ii F type ATPase in mitochondria chloroplasts and bacterial plasma membranes produce ATP using the proton gradient and iii V type ATPase catalyzes ATP hydrolysis to transport solutes and maintains acidic pH in organelles like lysosomes Genetic defects in either of the ATPases cause several diseases and a number of researches have demonstrated the involvement of the members of ATPases in the cell pathology and diseases thereby penetrating exciting new areas of our understanding In this book the authors summarize recent knowledge about the molecular mechanisms associated with Ca²⁺ ATPase V ATPase and F ATPase in intracellular and extracellular Ca²⁺ transport mitochondrial ATP synthase vesicular H transport and lysosomal pH regulation This book thereby bridges the gap between fundamental research and biomedical and pharmaceutical applications The book provides an informative resource to improve ATPase research and modern therapeutic approaches toward different life threatening diseases that are associated with dysregulation of the ATPases

membrane transport proteins for nearly thirty years and has taught courses in biochemistry and biomedicine at several universities

Biothermodynamics Mustafa Ozilgen, Esra Sorguven Oner, 2016-11-18 Over the past several decades there has been increasing research interest in thermodynamics as applied to biological systems This concerns topics such as muscle work and internal energy such as fat and starch Applications of the first and second laws of thermodynamics to the human body are important to dieticians and health science experts and applications of these concepts to the animal body are a major concern of animal scientists This book covers these key topics which are typically not covered in classic or traditional thermodynamics texts used in mechanical and chemical engineering

Handbook of ATPases Masamitsu Futai, Yoh Wada, Jack H. Kaplan, 2006-01-24 ATP dependent active ion transport enables cells to regulate their pH value and to control their ion composition The reverse process transforming an ion imbalance into chemical energy drives mitochondrial and chloroplast ATP synthesis The mediators of these fundamental processes are ion motive ATPases highly conserved enzymes that play key roles in cell physiology from bacteria to man As the first comprehensive overview of this important class of enzymes this handbook summarizes recent knowledge about the molecular mechanism of ATPases relating this information to the physiology and pathophysiology of ion transport mitochondrial function vesicle transport and lysosomal acidification All important P type F type and V type ATPases are treated systematically complemented by a special section on the cell biology and physiology of acidic compartments and backed by an extensive bibliography and index This premier reference source for physiologists molecular biologists biophysicists and clinical researchers contains contributions by the world's foremost ATPase research groups

Biophysical Chemistry of Proteins Engelbert Buxbaum, 2025-07-10 This textbook designed for all scientists interested in protein research provides a thorough overview of laboratory methods for the biophysical chemistry of proteins This new edition completely restructured and expanded for ease of learning includes sections on analytical techniques working with proteins protein size and shape protein structure enzyme kinetics industry enzymology and a new section on special statistics

An Innovative Approach to Understanding and Treating Cancer: Targeting pH Tomas Koltai, Stephan J. Reshkin, Salvador Harguindey, 2020-01-16 An Innovative Approach to Studying and Treating Cancer Targeting pH describes one of the few characteristics of cancer that is not shared by normal tissues the reversal or inversion of the pH gradient when intracellular pH becomes alkaline and extracellular pH becomes acid This is now recognized as one of the most selective and differential hallmarks of all cancer cells and tissues being the opposite of the condition found in normal tissues and a potential target in order to achieve either a stable disease or even regression with no toxicity The book discusses topics such as lactic acid and its transport system in the pH paradigm mechanisms to decrease extra cellular pH and increase intracellular pH NHE 1 activity in cancer carbonic anhydrases vacuolar ATPase proton pump and the sodium bicarbonate cotransporter system Additionally it discusses complementary pharmacological interventions cellular acidification and extracellular alkalinization as a new and integral approach to cancer treatment Analyzes the

mechanisms that lead to the inversion of pH gradient in cancer tissues Summarizes almost 100 years of research on pH inversion in cancer in one single source discussing the most relevant and updated researches in the field Proposes new efficient treatments against cancer using pH inversion mechanisms either with new drugs like proton transport inhibitors and proton pump inhibitors PTIs and PPIs or with repurposed drugs

ATPases A.G. Lee,1996-12-17 Volume 5 of Biomembranes covers an important group of membrane proteins the ATPases The P type ATPases couple the hydrolysis of ATP to the movement of ions across a membrane and are characterized by the formation of a phosphorylated intermediate Included are the plasma membrane and muscle sarcoplasmic reticulum Ca^{2+} ATPases the Na K ATPase the gastric H K ATPase the plasma membrane H ATPase of fungi and plants the Mg^{2+} transport ATPase the Salmonella typhimurium and the K ATPase of Escherichia coli KdpB The other important classes of ATPase in eukaryotic systems are the vacuolar H ATPases and the F₀F₁ ATP synthase and in bacteria the anion translocating ATPases responsible for resistance to arsenicals and antimonials and the Na Mg^{2+} ATPase of Achleplasma Finally eukaryotic systems contain a variety of ectonucleotidases important for example in hydrolysis of extracellular ATP released as a cotransmitter from cholinergic and adrenergic nerve terminals Volume 5 of Biomembranes explores structure function relationships for these mebrane bound ATPases
