Developing Synaesthesia Nicolas Rothen, Julia Simner, Beat Meier, 2015-07-24 Synaesthesia is a condition in which a stimulus elicits an additional subjective experience. For example, the letter E printed in black, the inducer, may trigger an additional colour experience as a concurrent, e.g. blue. Synaesthesia tends to run in families and thus a genetic component is likely. However, given that the stimuli that typically induce synaesthesia are cultural artefacts, a learning component must also be involved. Moreover, there is evidence that synaesthetic experiences not only activate brain areas typically involved in processing sensory input of the concurrent modality, synaesthesia seems to cause a structural reorganisation of the brain. Attempts to train non synaesthetes with synaesthetic associations have been successful in mimicking certain behavioural aspects and posthypnotic induction of synaesthetic experiences in non synaesthetes has even led to the according phenomenological reports. These latter findings suggest that structural brain reorganization may not be a critical precondition but rather a consequence of the sustained coupling of inducers and concurrents. Interestingly, synaesthetes seem to be able to easily transfer synaesthetic experiences to novel stimuli. Beyond this, certain drugs, e.g. LSD, can lead to synaesthesia-like experiences and may provide additional insights into the neurobiological basis of the condition. Furthermore, brain damage can both lead to a sudden presence of synaesthetic experiences in previously non synaesthetic individuals and a sudden absence of synaesthesia in previously synaesthetic individuals. Moreover, enduring sensory substitution has been effective in inducing a kind of acquired synaesthesia. Besides informing us about the cognitive mechanisms of synaesthesia, synaesthesia research is relevant for more general questions, for example about consciousness, such as the binding problem about crossmodal correspondences and about how individual differences in perceiving and experiencing the world develop. Hence, the aim of the current Research Topic is to provide novel insights into the development of synaesthesia both in its genuine and acquired form. We welcome novel experimental work and theoretical contributions, e.g. review and opinion articles focussing on factors such as brain maturation, learning, training, hypnosis, drugs, sensory substitution and brain damage and their relation to the development of any form of synaesthesia.

Reward- and aversion-related processing in the brain: translational evidence for separate and shared circuits Dave J. Hayes, Georg Northoff, Andrew J. Greenshaw, 2016-05-18 Affective brain circuits underpin our moods and emotions. Appetitive and aversive stimuli from our exteroceptive and interoceptive worlds play a key role in the activity of these circuits, but we still do not know precisely how to characterize these so-called reward-related and

aversion related systems Moreover we do we yet understand how they interact anatomically or functionally The aim of the current project was to gather some translational evidence to help clarify the role of such circuits A multi dimensional problem in its own right the book contains 14 works from authors exploring these questions at many levels from the cellular to the cognitive behavioural and from both experimental and conceptual viewpoints The editorial which introduces the book provides brief summaries of each perspective Hayes Northoff Greenshaw 2015 While questions of how to accurately define affect and emotion related concepts at the psychological level are far from answered here we have attempted to provide some insight into the brain based underpinnings of such processes The near future will undoubtedly involve making new inroads and will require the joint efforts of behavioural brain based and philosophical perspectives to do so *The Aging Consumer* Aimee Drolet,Carolyn Yoon,2020-10-01 The Aging Consumer Perspectives from Psychology and Marketing 2nd edition takes stock of what is known around age and consumer behavior identifies gaps and open questions within the research and outlines an agenda for future research There has been little systematic research done with respect to the most basic questions related to age and consumer behavior such as whether older adults versus young and middle age adults respond to marketing activities including pricing promotions product design and distribution Written by experts The Aging Consumer compiles research on a broad range of topics on consumer marketing from an individual to a societal level of analysis This second edition provides new versions of chapters contained in the 2010 volume that have been updated to reflect the latest psychological and marketing research and thinking Included also are ten new chapters which cover exciting new ground such as changes in metacognition in older adults motivated cognition of the aging consumer and a global perspective on aging and the economy across cultures This updated volume is beneficial for researchers and practitioners in marketing consumer behavior and advertising Additionally The Aging Consumer 2nd edition will appeal to professionals in other fields such as psychology decision sciences gerontology and gerontological social work and those who are concerned with normal human aging and its implications for the everyday behavior of older individuals It will also be of interest to those in fields concerned with the societal implications of an aging population such as economics policy and law Nature Reviews ,2002 **Psychology Express: Developmental Psychology (Undergraduate Revision Guide)** Penney Upton,Dominic Upton,2014-02-19 This revision guide provides concise coverage of the central topics within Developmental Psychology presented within a framework designed to help you focus on assessment and exams The guide is organised broadly chronologically but with a topical focus in tune with the majority of courses Sample questions assessment advice and exam tips drive the organisation within chapters so you are able to grasp and marshal your thoughts towards revision of the main topics Features focused on critical thinking practical applications and key research will offer additional pointers for you in you revision process and exam preparation A companion website provides supporting resources for self testing exam practice answers to questions in the book and links to further resources **APS Observer** ,1999 **Aesthetics and**

Architectural Composition Ralf Weber, Matthias Albrecht Amann, 2005 *World Development Report 2007* Emmanuel Jimenez, World Bank, 2006 Developing countries which invest in better education healthcare and job training for their young people between the ages of 12 and 24 years of age could produce economic growth and sharply reduced poverty With 1.3 billion young people now living in the developing world the largest ever youth group in history the report says there has never been a better time to invest in youth because they are healthier and better educated than previous generations and they will join the workforce with fewer dependents because of changing demographics The report says that young people make up nearly half of the ranks of the world's unemployed and as for example in the Middle East and North Africa region must create 100 million jobs by 2020 in order to stabilize its employment situation Moreover surveys of young people in East Asia and Eastern Europe and Central Asia carried out as research for the report indicate that access to jobs along with physical security is their biggest concern Far too many young people some 130 million 15-24 year olds cannot read or write Secondary education and skill acquisition make sense only if primary schooling has been successful This is still far from being the case and efforts have to be reinforced in this area In addition more than 20 percent of firms in countries such as Algeria Bangladesh Brazil China Estonia and Zambia rate poor education and work skills among their workforce Overcoming this handicap starts with more and better investments in youth The report highlights three areas to promote better investment in the future expanding opportunities enhancing capabilities and providing second chances Expanding opportunities focuses on increasing the quality of education smoothing the transition to work and providing young people with a platform for civic engagement Enhancing capabilities involves making young people aware of the consequences of their actions especially consequences that will affect them much later in life as well as building their decision making skills and giving them the right incentives Providing second chances calls for helping young people recover from missed opportunities through remedial education retraining treatment and rehabilitation Thomson Advantage: Psychology Dennis Coon, John O. The Science on Women and Science Christina Hoff Sommers, 2009 Women have achieved or exceeded parity with men in most academic fields but continue to be outnumbered in the physical sciences engineering and math For many equity activists this imbalance constitutes a serious problem even a crisis necessitating federal oversight to prevent gender bias in higher education and scientific industries Congress the Obama administration and many science and education leaders are considering dramatic measures to improve women's prospects in the sciences But what if claims of gender bias have been exaggerated In 2007 the National Academy of Sciences NAS released *Beyond Bias and Barriers Fulfilling the Promise of Women in Academic Science and Engineering* an influential study suggesting that women face a hostile environment in the laboratory The NAS report dismissed the possibility that gender disparities in scientific fields might be attributable to biological differences and called for immediate remedial action in education government and business This volume examines the research behind the NAS's claims and presents a more balanced analysis of the gender gap Scientific research on the relationship between gender and vocation is complex vibrant and full of reasonable disagreements Some scholars agree that discrimination is the best explanation for the current configuration of men and women in science but others perhaps a majority suggest that biology and considered preference explain why men and women follow different career paths *The Science on Women and Science* is a lively readable and balanced collection of articles by distinguished scholars from sides of an often contentious debate *Science* John Michels (Journalist), 2007
