Tannock,2012-12-06 Quality is a topical issue in manufacturing Competitive quality performance still eludes many manufacturers in the traditional industrialized countries A lack of quality competitiveness is one of the root causes of the relative industrial decline and consequent trade imbalances which plague some Western economies Many explanations are advanced for poor quality performance Inadequate levels of investment in advanced technology together with insufficient education and training of the workforce are perhaps the most prominent Some believe these problems are caused by a lack of awareness and commitment from top management while others point to differences between industrial cultures The established remedy is known as Total Quality Management TQM TQM requires a corporate culture change driven from the top and involving every employee in a process of never ending quality improvement aimed at internal as well as external customers The techniques deployed to achieve TQM include measures to improve motivation training in problem solving and statistical process control SPC Quality is however only one of the competitive pressures placed It is also upon the manufacturer by the modern global economy imperative to remain economical and efficient while increasing the flexibility and responsiveness of the design and manufacturing functions Here the reduction or elimination of stock is of great importance particularly as financial interest rates in the less successful manufacturing nations are frequently high Product life cycles must become ever more compressed in response to the phenomenal design to manufacture performance of some Pacific rim economies Live Looping in Musical Performance Alexsander Duarte,Susana Sardo,2023-08-23 Live Looping in Musical Performance offers a diverse range of interdisciplinary perspectives on the application of live looping technology by lusophone performers and composers This book explores various aspects including the aesthetic component instrumentation and setup highlighting the versatility of this technology in music making Written by musicians and researchers from Portuguese speaking countries this book comprises eleven chapters that delve into various musical contexts genres and practices The novelty of including collaborative texts written alongside non professional researchers offers the possibility of
