Acoustics & Vibration of Mechanical Structures Nicolae Herisanu, Vasile Marinca, 2013-09-27 Selected peer reviewed papers from the XII th International Symposium Acoustics Vibration of Mechanical Structures AVMS 2013 May 23 24 2013 Timi oara Romania *Innovative Approaches in Computational Structural Engineering* George C. Tsiatas, Vagelis Plevris, 2020-04-22 Nowadays numerical computation has become one of the most vigorous tools for scientists researchers and professional engineers following the enormous progress made during the last decades in computing technology in terms of both computer hardware and software development Although this has led to tremendous achievements in computer based structural engineering the increasing necessity of solving complex problems in engineering requires the development of new ideas and innovative methods for providing accurate numerical solutions in affordable computing times This collection aims at providing a forum for the presentation and discussion of state of the art innovative developments concepts methodologies and approaches in scientific computation applied to structural engineering It involves a wide coverage of timely issues on computational structural engineering with a broad range of both research and advanced practical applications This Research Topic encompasses but is not restricted to the following scientific areas modeling in structural engineering finite element methods boundary element methods static and dynamic analysis of structures structural stability structural mechanics meshless methods smart structures and systems fire engineering blast engineering structural reliability structural health monitoring and control optimization and composite materials with application to engineering structures *Dynamics of the Axially Moving Orthotropic Web* Krzysztof Marynowski, 2010-07-07 A material continuum moving axially at high speed can be met in numerous different technical applications These comprise band saws web papers during manufacturing processing and printing processes textile bands during manufacturing and processing pipes transporting fluids transmission belts as well as flat objects moving at high speeds in space In all these so varied technical applications the maximum transport speed or the transportation speed is aimed at in order to increase efficiency and optimize investment and performance costs of sometimes very expensive and complex machines and installations The dynamic behavior of axially moving systems very often hinders from reaching these aims The book is devoted to dynamics of axially moving material objects of low flexural stiffness that are referred to as webs Webs are moving at high speed for example in paper production the paper webs are transported with longitudinal speeds of up to 3000 m min Above the critical speed one can expect various dynamical instabilities mainly of divergent and flutter type The up to date state of investigations conducted in the field of the axially moving system dynamics is presented in the beginning of the book Special attention is paid on nonlinear dynamic investigations of translating systems In the next chapters various mathematical models that can be employed in dynamic investigations of such objects and the results of analysis of the dynamic behavior of the axially moving orthotropic material web are presented To make tracing the dynamic considerations easier a paper web is the main object of investigations in the

book **Identification Methods for Structural Health Monitoring** Eleni Chatzi,Costas Papadimitriou,2016-05-25 The papers in this volume provide an introduction to well known and established system identification methods for structural health monitoring and to more advanced state of the art tools able to tackle the challenges associated with actual implementation Starting with an overview on fundamental methods introductory concepts are provided on the general framework of time and frequency domain parametric and non parametric methods input output or output only techniques Cutting edge tools are introduced including nonlinear system identification methods Bayesian tools and advanced modal identification techniques such as the Kalman and particle filters the fast Bayesian FFT method Advanced computational tools for uncertainty quantification are discussed to provide a link between monitoring and structural integrity assessment In addition full scale applications and field deployments that illustrate the workings and effectiveness of the introduced monitoring schemes are demonstrated **Acoustics Today** ,2007 **Scientific and Technical Aerospace Reports** ,1990
