Medicine Jan de Boer, Marcel Dubouloz, 2020-04-28 Technological development has not only provided mankind with more prosperity but with increased destructive power as well. These developments combined with an explosive growth of the world population have led to mass casualty situations varying from traffic accidents to war. In the 20th Century over 200 million people were killed as a result of man made disasters a figure unequalled in the history of mankind. It is not surprising therefore that a new medical discipline has emerged disaster medicine. The realization that disasters have effects which cross the traditional boundaries of medical specialisms and nationality led to the foundation of the International Society of Disaster Medicine ISDM which issued an international curriculum on education and training in disaster medicine. As a logical consequence the ISDM decided to develop its curriculum into a handbook now available to the global community of disaster medicine specialists. This Handbook of Disaster Medicine contains contributions from international experts in the field and will be of value and interest to a wide variety of professionals in the discipline of disaster medicine and management.

Disaster Medicine Sneha Chacko, 2019 **Manual of Disaster Medicine** Daniel Reis, Eran Dolev, 2011-12-21 This book is not a learned treatise. Its purpose is to render practical instruction to all those physicians surgeons administrators and paramedical personnel who have to act in war or disaster situations. As a manual it is in no way a substitute for existing detailed and specialized texts on the various aspects of trauma surgery and management rather have we attempted to collate the most essential knowledge required to organize and afford medical aid whenever civilian or military disaster strikes. The man on the spot is hardly ever a specialist hence the need for a simple general manual of instruction. The organizational

aspects of medical services in war are very similar to those required for coping with a disaster indeed the military are often called to cope with civilian disasters Our duty is to be prepared so as not to lose life and limb for lack of foresight There are repetitions in the book for which no apologies are made since they always concern invaluable knowledge The chapters are organized to afford an understanding of the organization of medical services the cause of wounds and traumatic disease and the pathophysiological processes resulting from the different kinds of trauma The management of treating casualties is divided in each section into the three basic echelons on site at the actual place of wounding at the medical battalion aid station and in the field or base hospital
