

All About Artificial Intelligence (AI)

AI Today

Today, AI is used across the globe and in many ways. From Netflix and YouTube, use AI to recommend what users are watching already. From voice assistants, you can ask questions and get answers. Many smartphones use AI for face lock and other features.

Other uses of AI include smart home devices, autonomous cars, and even engines that use AI to predict oil prices.

In the field of medicine, AI is helping to diagnose patients. Researchers are also using AI to discover new drugs.

Advantages and Disadvantages

AI technology is a double-edged sword. It can be used to create jobs and improve lives, but it can also be used to create weapons and surveillance. It can also be used to replace human jobs, leading to unemployment.

However, there are some potential benefits. AI can be extremely accurate and fast, which is useful in many fields. It can also be used to create new products and services, leading to economic growth.

How Is AI Evolving?

While most current AI is referred to as narrow AI, which means it can only perform the task it was designed for, researchers are working on creating AI machines or robots that can perform a wide range of tasks. This is called general AI, and it is the holy grail of AI research. It is currently being researched by many scientists and engineers.

Presently, AI is used all over the world. From streaming services, such as Netflix, to voice assistants, such as Siri, AI is everywhere. Many smartphones use AI for face lock and other features.

Artificial intelligence (AI) technology, such as streaming services and chatbots, are used by people around the world every day.

What Is AI?

AI is a computer that can think and learn like a human. It uses the information and instructions it is given to solve problems, make predictions, and more.

The History of AI

In 1943, British mathematician Alan Turing wrote about his idea of an intelligent machine that could use its unlimited memory and give information to itself and follow a set of instructions.

After a few years, computers and technology had improved enough that the computer Turing was able to write one of the first AI programs in 1950. In 1956, American John McCarthy created the term "artificial intelligence." In 1956, Allen Newell, John McCarthy, and Herbert A. Simon created the first program to solve problems with human-like intelligence.

As time went on, knowledge of computers, AI, and technology grew. In 1997, an AI computer named Deep Blue won a chess game against the reigning world chess champion, Garry Kasparov. In 1998, Russian Vladimir Likhvinov built a robot, an advanced humanoid robot.

Did You Know...?

Many smartphones use AI for face ID security.

AI Today

Currently, AI is used worldwide and in numerous ways. Streaming services, such as Netflix and YouTube, use AI to recommend shows to watch based on what is popular in their platform. Virtual assistants, such as Siri, use AI to answer questions and complete tasks.
