Johnson, 2016-01-28 For many of us the connection between the ecological crisis and humanity's detachment from the land is becoming increasingly clear In biblical terms adam humanity has severed itself from the adamah soil and we creation are reaping the consequences This collection of essays and the conference from which it took shape calls the church to root itself more deeply in the agrarian biblical text and ecclesial tradition in order to remember and freshly imagine ways of living on and with the land that are restorative reconciling and faithful to the triune God's invitation to new life in Christ When we listen attentively to and patiently learn from the biblical text church history and theology the land itself can become a conversation partner and we are summoned to recognize that the gospel is reserved not simply for humanity but for the whole of creation **The Restless and Relentless Mind of Wes Jackson** Robert Jensen, 2024-03-22 In more than four

decades as president of The Land Institute Wes Jackson became widely known as one of the founders of the sustainable agriculture movement for his work on perennial grains and Natural Systems Agriculture But Jackson's contribution to contemporary intellectual and political life goes well beyond plant breeding Ever since he created one of the first university environmental studies programs in the early 1970s Jackson has been exploring the human predicaments around sustainability and justice asking questions that pull not only on agriculture and ecology but also on politics economics and culture That work has appeared in four sole authored books by Jackson but nowhere is there an accessible summary of his key ideas Robert Jensen provides a short elegant introduction to Jackson's ideas on ways to provide humanity with a truly sustainable foundation in grain agriculture presented in a way that connects to the growing concern about climate change and other ecological crises Jackson's strength has been in generating new ideas and pushing the envelope not only on sustainable agriculture but also on the other dramatic changes necessary if we are to create a sustainable and just society This volume helps the reader to organize those exciting ideas in a way that can expand the horizons of students and lay readers as well as challenge specialists in these fields In a time when critical thinking and clear understanding are desperately needed if we are to face the multiple cascading ecological and social crises The Restless and Relentless Mind of Wes Jackson presents Jackson's crucial insights about the natural world and human societies that can help provide a framework for understanding the tough decisions we will have to make But just as important is the book's glimpse into the curiosity that drives Jackson and the creativity that distinguishes his intellectual and activist work **Biosequestration**

Earth's forests and other land use changes have resulted in ever higher levels of waste in the form of greenhouse gases as well as a diminished capacity of the planet to absorb and store those wastes. This means that to avoid catastrophic global warming and maintain the habitability of the planet, we must change our relationship with nature. This book explores how an alternative conception of property might be instead grounded in the ecocentric concept of an Earth community. Recognising that human beings are deeply interconnected with and dependent on nature, this concept is proposed as a standard and measure for human law. This book argues that the anthropocentric institution of private property needs to be reconceived drawing on international case law, indigenous views of property and the land use practices of agrarian communities. Peter Burdon considers how private property can be reformulated in a way that fosters duties towards nature. Using the theory of earth jurisprudence as a guide, he outlines an alternative ecocentric description of private property as a relationship between and among members of the Earth community. This book will appeal to those researching in law, justice and ecology as well as anyone pursuing an interest more particularly in earth jurisprudence.

The Biomimicry Revolution Henry Dicks, 2023-03-14 Winner 2024 Symposium Book Award Canadian Society for Continental Philosophy. Modernity is founded on the belief that the world we build is a human invention, not a part of nature. The ecological consequences of this idea have been catastrophic. We have laid waste to natural ecosystems, replacing them with fundamentally unsustainable human designs. With time running out to address the environmental crises we have caused, our best path forward is to turn to nature for guidance. In this book, Henry Dicks explores the philosophical significance of a revolutionary approach to sustainable innovation: biomimicry. The term describes the application and adaptation of strategies found in nature to the development of artificial products and systems, such as passive cooling techniques modeled on termite mounds or solar cells modeled on leaves. Dicks argues that biomimicry, typically seen as just a design strategy, can also serve as the basis for a new environmental philosophy that radically alters how we understand and relate to the natural world. By showing how we can imitate, emulate, and learn from nature, biomimicry points us toward a genuinely sustainable way of inhabiting the earth. Rooted in philosophy, *The Biomimicry Revolution* has profound implications spanning the natural sciences, design, architecture, sustainability studies, science and technology studies, and the environmental humanities. It presents a sweeping reconception of what philosophy can be and offers a powerful new vision of terrestrial existence.

International Law and Agroecological Husbandry John W. Head, 2016-11-25 Remarkable advances are being made in life science and agricultural research to reform the methods of food production, particularly with regard to staple grain and legume crops, in ways that will better reflect ecological realities. However, advances in science may be insufficient to ensure that these possibilities for agricultural reform are realized in practice and in a sustainable way. This

book shows how these can only be achieved through changes in legal norms and institutions at the global level Interdisciplinary in character the book draws from a range of issues involving agricultural innovation international legal history and principles treaty commitments global institutions and environmental challenges such as climate change to propose broad legal changes for transforming global agriculture It first shows how modern extractive agriculture is unsustainable on economic environmental and social grounds It then examines the potential for natural systems agriculture especially perennial polyculture systems for overcoming the deficiencies of modern extractive agriculture especially to offset climate change Finally it analyses closely the legal innovations that can be adopted at national and international levels to facilitate a transition from modern extractive agriculture to a system based more on ecological principles In particular the author argues for the creation of a Global Convention on Agroecology

Nature of Investing Katherine Collins, 2016-10-21 We are all investors We invest our time our energy our money We invest every single day as citizens as consumers as businesspeople At its core investing involves connection exchange and mutual benefit Lately however the primary beneficial function of investing has been overshadowed by ever more mechanized iterations of finance We have created funds of funds securitizations of securitizations and entire firms whose business is based on harvesting the advantage of microseconds of trading speed The Nature of Investing calls for a transformation of the investment process from the roots up Drawing on the author's twenty plus years of leadership experience in top investment firms the book connects real world finance with the field of biomimicry Citing real life examples and discussing principles from the natural world The Nature of Investing shows how we can create an investment framework that is different from the mechanized one currently employed Readers will discover an approach that re aligns investing with the world it was originally meant to serve An approach that values resiliency over rigidity and elegant simplicity over synthetic complexity This is the true nature of investing

The Ethics of Biotechnology Gaymon Bennett, 2022-01-26 The essays collected in this volume provide students of ethics with essential tools for making sense of emerging biotechnical capacities and the turbulent power relations these capacities are bringing into the world Unlike previous reference works in bioethics which focus on specific domains of human activity such as genetic research or biomedicine this volume directs students attention to the underlying cultural and institutional forces that shape how biotechnologists approach the world and teaches students how to weigh the ethical significance of these forces This innovative approach to the ethics of biotechnology detailed in the volume's introduction equips students to track the dynamic interplay of biology digital technology and the high tech economy which is remaking the living world today and the human relation to it

Deep Agroecology and the Homeric Epics John W. Head, 2020-12-15 Drawing on the Homeric epics this multidisciplinary work reveals the cultural transformations which need to take place in order to transition from today's modern extractive agricultural system to a sustainable natural systems agriculture In order to provide an imaginative foundation on which to build such a cultural transformation the author draws on the oldest and most pervasive pair of

literary works in the Western canon the Iliad and the Odyssey He uses themes from those foundational literary works to critique the concept of state sovereignty and to explain how innovative federalism structures around the world already show momentum building toward changes in global environmental governance The book proposes a dramatic expansion on those innovations to create eco states responsible for agroecological management Drawing from many years of experience in international institutions the author proposes a system of coordination by which an international agroecology focused organization would simultaneously i avoid the shortcomings of the world s current family of powerful global institutions and ii help create and implement a reformed system of local landscape based agriculture wholly consistent with ecological principles Acknowledging the difficulty of achieving reforms such as these the author suggests that a new cultural conceptual narrative can be constructed drawing on values set forth 2 700 years ago in the Homeric epics He explains how these values can be reimagined to drive forward our efforts in addressing today s the climate and agricultural crises in ways that reflect not reject the natural processes and relationships that make the Earth a living planet This book will be of great interest to students academics and policymakers addressing issues of agrarian values environmental and agricultural law environmental restoration agroecology and global institutional reform

The Practice of the Wild Gary Snyder, 2020-09-08 A collection of captivatingly meditative essays that display a deep understanding of Buddhist belief wildness wildlife and the world from an American cultural force With thoughts ranging from political and spiritual matters to those regarding the environment and the art of becoming native to this continent the nine essays in *The Practice of the Wild* display the deep understanding and wide erudition of Gary Snyder These essays first published in 1990 stand as the mature centerpiece of Snyder s work and thought and this profound collection is widely accepted as one of the central texts on wilderness and the interaction of nature and culture

River Restoration Bertrand Morandi, Marylise Cottet, Hervé Piégay, 2021-09-27 River Restoration River restoration initiatives are now widespread across the world The research efforts undertaken to support them are increasingly interdisciplinary focusing on ecological chemical physical as well as societal issues River Restoration Political Social and Economic Perspectives provides a comprehensive overview of research in the field of river restoration in humanities and the social sciences It illustrates how in the last thirty years or so such approaches have evolved and strengthened within the restoration sciences The scientific community working in this domain has structured itself often regionally and circumstantially to critically assess and improve restoration policies and practices As a research field river restoration tackles three thematic axes Human river interactions especially perceptions and practices of rivers and how these interactions can be changed by restoration projects Political processes with a particular interest in governance and decision making and a specific emphasis on the question of public participation in restoration projects Evaluation of the social and economic benefits of river restoration River Restoration Political Social and Economic Perspectives encompasses these three topics and more to provide the reader with the most up to date and holistic view of this constantly evolving area The book

will be of particular interest to human and social scientists biophysical scientists hydrologists geomorphologists ecologists environmental scientists public policy makers design or planning officers and anyone working in the field of river restoration

A Global Corporate Trust for Agroecological Integrity John W. Head, 2019-06-14 This book examines global environmental governance and how legal institutional and conceptual reform can facilitate a transformation to a new natural systems form of agriculture. Profound global climate disruption makes it essential that we replace our current agricultural system described in this book as a fossil carbon dependent modern extractive agriculture with a natural systems agriculture featuring perennial grains growing in polycultures thereby mimicking the natural grassland and forest ecosystems that modern extractive agriculture has largely destroyed. After examining relevant international legal and conceptual foundations sovereignty federalism global governance and existing international organizations focusing on agriculture the book explores legal and institutional opportunities to facilitate dramatic agricultural reform and ecological restoration. Among other things it explains how innovative federalism structures around the world provide patterns for reorienting global environmental governance including what the book calls eco states that would through exercise of pluralistic sovereignty be responsible for agroecological management. Drawing from his experience working in international institutions the author provides detailed global governance proposals for facilitating the type of agricultural reform that can help avoid ecological collapse especially through soil degradation and climate change. This book will be of great interest to students and scholars of international law agroecology climate change ecological restoration sustainable development and global governance as well as policy makers and practitioners working in these fields.

How the World Breaks Stan Cox, Paul Cox, 2016-07-12 We've always lived on a dangerous planet but its disasters aren't what they used to be. *How the World Breaks* gives us a breathtaking new view of crisis and recovery on the unstable landscapes of the Earth's hazard zones. Father and son authors Stan and Paul Cox take us to the explosive fire fronts of overheated Australia the future lost city of Miami the fights over whether and how to fortify New York City in the wake of Sandy the Indonesian mud volcano triggered by natural gas drilling and other communities that are reimagining their lives after quakes superstorms tornadoes and landslides. In the very decade when we should be rushing to heal the atmosphere and address the enormous inequalities of risk a strange idea has taken hold of global disaster policy: resilience. Its proponents say that threatened communities must simply learn the art of resilience adapt to risk and thereby survive. This doctrine obscures the human hand in creating disasters and requires the planet's most beleaguered people to absorb the rush of floodwaters and the crush of landslides freeing the world economy to go on undisturbed. The Coxes' great contribution is to pull the disaster debate out of the realm of theory and into the muck and ash of the world's broken places. There we learn that change is more than mere adaptation and life is more than mere survival. Ultimately *How the World Breaks* reveals why unless we address the social ecological and economic roots of disaster millions more people every year will find themselves spiraling into misery. It is essential reading for our time.
