Naval Engineers Journal ,1991 **The Taking of K-129** Josh Dean, 2018-09-25 An incredible true tale of espionage and engineering set at the height of the Cold War a mix between The Hunt for Red October and Argo about how the CIA the U S Navy and America s most eccentric mogul spent six years and nearly a billion dollars to steal the nuclear armed Soviet submarine K 129 after it had sunk to the bottom of the Pacific Ocean all while the Russians were watching In the early hours of February 25 1968 a Russian submarine armed with three nuclear ballistic missiles set sail from its base in Siberia on a routine combat patrol to Hawaii Then it vanished As the Soviet Navy searched in vain for the lost vessel a small highly classified American operation using sophisticated deep sea spy equipment found it wrecked on the sea floor at a depth of 16 800 feet far beyond the capabilities of any salvage that existed But the potential intelligence assets onboard the ship the nuclear warheads battle orders and cryptological machines justified going to extreme lengths to find a way to raise the submarine So began Project Azorian a top secret mission that took six years cost an estimated 800 million and would become the largest and most daring covert operation in CIA history After the U S Navy declared retrieving the sub impossible the mission fell to the CIA s burgeoning Directorate of Science and Technology the little known division responsible for the legendary U 2 and SR 71

Blackbird spy planes Working with Global Marine Systems the country's foremost maker of exotic deep sea drilling vessels the CIA commissioned the most expensive ship ever built and told the world that it belonged to the reclusive billionaire Howard Hughes who would use the mammoth ship to mine rare minerals from the ocean floor In reality a complex network of spies scientists and politicians attempted a project even crazier than Hughes's reputation raising the sub directly under the watchful eyes of the Russians

Whaleback Ships and the American Steel Barge Company C. Roger Pellett, 2018-05-14 A history of the American Steel Barge Company and the vessels that it built and operated The whaleback ship reflected the experiences of its inventor Captain Alexander McDougall who decided in the 1880s that he could build an improved and easily towed barge cheaply by using the relatively unskilled labor force available in his adopted hometown of Duluth Minnesota Captain McDougall's dream resulted in the creation of the American Steel Barge Company From 1888 to 1898 the American Steel Barge Company built and operated a fleet of forty four barges and steamships on the Great Lakes and in international trade These new ships were considered revolutionary by some and nautical curiosities by others Built from what was then a high tech material steel and powered by state of the art steam machinery their creation in the remote north was a sign of industrial accomplishment In *Whaleback Ships and the American Steel Barge Company* Roger C Pellett explains that the construction of these ships and the industrial infrastructure required to build them was financed by a syndicate that included some of the major players active in the Golden Age of American capitalism The American Steel Barge Company operated profitably from 1889 through 1892 each year adding new vessels to its growing fleet By 1893 it had run out of cash The cash crisis worsened with the onset of the Panic of 1893 which plunged the country into a depression that mostly halted the ship building industry Only one shareholder John D Rockefeller was willing and able to invest in the company to keep it afloat and by doing so he gained control When prosperity returned in 1896 the interest in huge iron ore deposits on the Mesabe Range required larger more efficient vessels In an attempt to meet this need the company built another vessel that incorporated many whaleback features but included a conventional Great Lakes steamship bow Although this new steamship compared favorably with vessels of conventional design it was the last vessel of whaleback design to be built

Whaleback Ships and the American Steel Barge Company objectively examines the design of these ships using the original design drawings notes the successes and failures of the company's business strategy and highlights the men at the operating level that attempted to make this strategy work Readers interested in the maritime history of the Great Lakes and the industries that developed around them will find this book fascinating
