Commodity and Manufactures Prices in the Long Run Mr.James M. Boughton,1991-05-01 The low level of primary commodity prices since 1985 is examined in the context of the behavior of those prices relative to prices of manufactured goods since 1854 The Prebisch Singer hypothesis of a secular decline in relative commodity prices is sustained but the recent decline is shown to be well outside the realm of historical experience Commodity and manufactures prices are found to be cointegrated conditional on the negative trend and a number of unexplained short term swings The earlier finding of a Gibson paradox is explained in terms of the difference between short and long run relationships

Commodity Prices and Inflation International Monetary Fund,1989-09-14 A two country theoretical model is presented showing the effects of monetary fiscal and supply side disturbances on prices of primary commodities and manufactured goods and on exchange rates If monetary shocks dominate then commodity prices should lead general price movements and the level of commodity

prices should be correlated with the general inflation rate Country specific commodity price indexes are developed for the major industrial countries Several empirical tests broadly support the conclusions of the model Commodity price levels tend to be cointegrated with consumer price inflation rates Commodity price movements contribute weakly to predictions of inflation rates but more strongly to predictions of turning points in inflation

Bioeconomy for Beginners Joachim Pietzsch, 2020-03-06 This book provides an interdisciplinary and comprehensible introduction to bioeconomy It thus provides basic knowledge for understanding a transformation process that will shape the 21st century and requires the integration of many disciplines and industries that have had little to do with each other up to now We are talking about the gradual and necessary transition from the age of fossil fuels which began around 200 years ago to a global economy based on renewable raw materials and renewable energies The success of this transition is key to coping with the challenge of climate change This book conceives the realization of bioeconomy as a threefold task a scientific an economic and an ecological one Where does the biomass come from that we need primarily for feeding the growing world population but also for future energy and material use How can it be processed in biorefineries and what role does biotechnology play in this regard Which aspects of innovation economics need to be considered which economic aspects of value creation competitiveness and customer acceptance are important What conditions must a bioeconomy fulfil in order to enable a sustainable development of life on earth May it be regarded as a key to further economic growth or shouldn't it rather orient itself towards the ideal of sufficiency By dealing with these questions from the not necessarily consistent perspectives of proven experts this book provides an interdisciplinary overview of a dynamic field of research and practice that raises more questions than answers and thus may nurture the motivation of many more people to seriously engage for the realization of a bioeconomy

Commodity Prices Mr.Peter Wickham,Ms.Carmen Reinhart,1994-01-01 Primary commodities still account for the bulk of exports in many developing countries However real commodity prices have been declining almost continuously since the early 1980s and there is evidence of renewed weakness The appropriate policy response to a terms of trade shock depends importantly on whether the shock is perceived to be temporary or permanent Our results indicate that the recent weakness in commodity prices is mostly of a secular nature stressing the need for commodity exporting countries to concentrate on export diversification and other structural policies There is however scope for stabilization funds and the use of hedging strategies since the evidence also suggests commodity prices have become more volatile
