Natural History of Infectious Disease J. A. Boycott, 1974 **Natural History of Infectious Disease** Frank MacFarlane Burnet, 1962 Natural History of Infectious Disease Sir Frank Macfarlane Burnet, 1953 **Principles and Practice of Emergency Research Response** Robert A. Sorenson, 2024-08-31

Unlocking the Future of Infectious Disease Research Response In a world where emerging infectious diseases constantly threaten humanity advances in science and technology promise defense against future pathogens before they cause pandemics The field of emergency research response and preparedness remains in its infancy however Not until the 2014 West African Ebola outbreak was accelerated research broadly recognized as a crucial component of emergency response Many outbreaks and one global pandemic later it is clear the world must be prepared to launch accelerated research responses to prevent or mitigate infectious disease outbreaks epidemics and pandemics Yet this nascent field is rife with critical scientific ethical and policy questions How can local national and global systems collaborate across disciplines and political boundaries to protect health security How can we conduct rigorous research in fragile or failed nation states What is needed for equitable distribution of vaccines and therapeutic medicines in short supply How can we accelerate trials of vaccines and therapeutics during an emergency without compromising scientific rigor or ethical standards How do we integrate communities and stakeholders into research preparedness and response The editors bring decades of experience to their collaboration with renowned research scientists and health policy experts Together they have crafted a compendium that proposes normative standards and offers practical guidance for preparedness and rapid research response This pioneering open access textbook presents principles and practices forged from experience in health emergencies insights that illuminate a path forward for research response and preparedness The goal is to stop outbreaks from becoming avoidable pandemics and to mitigate illness death and social disruption if they cannot be stopped Principles and Practice of Emergency Research Response merges historical understanding with insights into possible futures It will serve as an indispensable compass for curtailing infectious disease threats through research global health policy changes and research capacity improvements where they are most needed The editors hope that this book will be an ongoing reference for governments health organizations development agencies researchers policy experts ethicists and social scientists To facilitate focused and enhanced learning it incorporates pedagogical tools such as abstracts learning objectives discussion questions real life examples and learning tracks Robust global health security requires effective preparation for and response to emerging and re emerging pathogens This volume should help guide us towards a more resilient future

A History of Disease in Ancient Times Philip Norrie, 2016-06-25 This book shows how bubonic plague and smallpox helped end the Hittite Empire the Bronze Age in the Near East and later the Carthaginian Empire The book will examine all the possible infectious diseases present in ancient times and show that life was a daily struggle for survival either avoiding or fighting against these infectious disease epidemics The book will

argue that infectious disease epidemics are a critical link in the chain of causation for the demise of most civilizations in the ancient world and that ancient historians should no longer ignore them as is currently the case Infections, Chronic Disease, and the Epidemiological Transition Alex Mercer, 2014 In 1949 the U S National Cancer Institute NCI and the Canadian Department of National Health and Welfare DNHW commissioned a film eventually called Challenge Science Against Cancer as part of a major effort to recruit young scientists into cancer research Both organizations feared that poor recruitment would stifle the development of the field at a time when funding for research was growing dramatically The fear was that there would not be enough new young scientists to meet the demand and that the shortfall would undermine cancer research and the hopes invested in it Challenge aimed to persuade young scientists to think of cancer research as a career This book is the story of that forgotten film and what it tells us about mid twentieth century American and Canadian cancer research educational filmmaking and health education campaigns It explores why Canadian and American health agencies turned to film to address the problem of scientist recruitment how filmmakers turned such recruitment concerns into something they thought would work as a film and how information officers at the NCI and DNHW sought to shape the impact of Challenge by embedding it in a broader educational and propaganda program It is in short an account of the important but hitherto undocumented roles of filmmakers and information officers in the promotion of post Second World War cancer research
