Fibershed Rebecca Burgess, Courtney White, 2019-11-19 Fibershed is a story of vision persistence and kindness With patience and grace Rebecca has restored a sense of gratitude for the overlooked grasses and herbaceous plants that were once our second skin From the living world around her she has stitched together the broken strands of textile arts creating an economy of place where makers are artists and clothing is revered Paul Hawken author of *Carbon* A new farm to closet vision for the clothes we wear by a leader in the movement for local textile economies There is a major disconnect between what we wear and our

knowledge of its impact on land air water labor and human health Even those who value access to safe local nutritious food have largely overlooked the production of fiber dyes and the chemistry that forms the backbone of modern textile production While humans are 100 percent reliant on their second skin it s common to think little about the biological and human cultural context from which our clothing derives Almost a decade ago weaver and natural dyer Rebecca Burgess developed a project focused on wearing clothing made from fiber grown woven and sewn within her bioregion of North Central California As she began to network with ranchers farmers and artisans she discovered that even in her home community there was ample raw material being grown to support a new regional textile economy with deep roots in climate change prevention and soil restoration A vision for the future came into focus combining right livelihoods and a textile system based on economic justice and soil carbon enhancing practices Burgess saw that we could create viable supply chains of clothing that could become the new standard in a world looking to solve the climate crisis In Fibershed readers will learn how natural plant dyes and fibers such as wool cotton hemp and flax can be grown and processed as part of a scalable restorative agricultural system They will also learn about milling and other technical systems needed to make regional textile production possible Fibershed is a resource for fiber farmers ranchers contract grazers weavers knitters slow fashion entrepreneurs soil activists and conscious consumers who want to join or create their own fibershed and topple outdated and toxic systems of exploitation

Prehistoric Textile Art of Eastern United States William Holmes,2016-12-30 About the year 1890 the writer was requested by the Director of the Bureau of Ethnology to prepare certain papers on aboriginal art to accompany the final report of Dr Cyrus Thomas on his explorations of mounds and other ancient remains in eastern United States These papers were to treat of those arts represented most fully by relics recovered in the field explored They included studies of the art of pottery of the textile art and of art in shell and a paper on native tobacco pipes Three of these papers were already completed when it was decided to issue the main work of Dr Thomas independently of the several papers prepared by his associates It thus happens that the present paper written to form a limited section of a work restricted to narrow geographic limits covers so small a fragment of the aboriginal textile field The materials considered in this paper include little not germane to the studies

conducted by Dr Thomas in the mound region the collections used having been made largely by members of the Bureau of Ethnology acting under his supervision Two or three papers have already been published in the annual reports of the Bureau in which parts of the same collections have been utilized and a few of the illustrations prepared for these papers are reproduced in this more comprehensive study Until within the last few years textile fabrics have hardly been recognized as having a place among the materials to be utilized in the discussion of North American archeology Recent studies of the art of the mound building tribes have however served to demonstrate their importance and the evidence now furnished by this art can be placed alongside of that of arts in clay stone and metal as a factor in determining the culture status of the prehistoric peoples and in defining their relations to the historic Indians This change is due to the more careful investigations of recent times to the utilization of new lines of archeologic research and to the better knowledge of the character and scope of historic and modern native art A comparison of the textiles obtained from ancient mounds and graves with the work of living tribes has demonstrated their practical identity in materials in processes of manufacture and in articles produced Thus another important link is added to the chain that binds together the ancient and the modern tribes

DEFINITION OF THE ART

The textile art dates back to the very inception of culture and its practice is next to universal among living peoples In very early stages of culture progress it embraced the stems of numerous branches of industry afterward differentiated through the utilization of other materials or through the employment of distinct systems of construction At all periods of cultural development it has been a most indispensable art and with some peoples it has reached a marvelous perfection both technically and esthetically Woven fabrics include all those products of art in which the elements or parts employed in construction are more or less filamental and are combined by methods conditioned chiefly by their flexibility The processes employed are known by such terms as wattling interlacing plaiting netting weaving sewing and embroidering

MATERIALS AND PROCESSES

Viewing the entire textile field we find that the range of products is extremely wide On the one hand there is the rude interlacing of branches vines roots and canes in constructing houses weirs cages rafts bridges and the like and on the other the spinning of threads of almost microscopic fineness and the weaving of textures of marvelous delicacy and beauty The more cultured peoples of Central America and South America had accomplished wonders in the use of the loom and the embroidery frame but the work of the natives of the United States was on a decidedly lower plane In basketry and certain classes of garment making
