The Autonomy Approach Brian Morrison, Diego

Navarro, 2014-03-27 The Autonomy Approach presents an important departure from the theoretical discussions which underpin the majority of work on learner autonomy. It introduces a practical perspective to self-directed language learning: teachable, learnable activities rooted in principles of learning which draw on aspects of study skills and strategies as well as a variety of approaches, namely differentiated, individualised, self-directed, self-access and open access learning. With the Autonomy Approach, emphasis is placed on students being supported in class to learn at their own pace away from the classroom; in other words, self-directing their own learning. The authors examine and explain the theory behind metacognitive knowledge and skills and support this with an extensive sequence of activities for the teacher and the learner to use to help learners take the development of their language learning into their own hands. The activities in this book aim not to teach a language but rather to raise awareness of different aspects of language learning to encourage learners and teachers to share, select and try out activities and to reflect on the effectiveness of what they have tried. The activities are suitable for developing a self-directed learning course or for supplementing an existing course. This book is intended for language teachers and learning advisors, trainers involved in professional development, materials developers for self-access centres or distance education. The Autonomy Approach contains three distinctive parts which focus in turn on theory, practice and development. Part A offers a detailed breakdown of the philosophy behind the Autonomy Approach. Clear rationales are established for promoting self-directed learning and teachers are invited to reflect on the benefits of learners taking more responsibility for their own learning. Part B is packed with step-by-step activities to support learners through the development, implementation and modification of an emerging individualised learning plan. Part C promotes a deeper understanding of the Autonomy Approach and includes strategies to develop professional practice for us as language learning facilitators to learn and grow from our own experience.

Self-Regulation Neil Mars, Many children and young people with poor school performance have a negative attitude towards study as well as demotivation and unsuitable habits. But it is required of students an increasingly autonomy in learning although what is intended in the background is to develop in these capacities necessary so that they can continue their lifelong learning. In this sense it is important to know the various structuring and dynamic components in the educational situation and how they influence each other. The conscious reflection on these dynamics is what allows parents, teachers and educators in general to help children, teenagers and even adults in the learning process and in learning with autonomy and self-critical capacity thus obtaining satisfactory results along that route and also throughout their adult life.
