Naturalists At Sea Scientific Travellers From Dampier To Darwin:

Naturalists at Sea Glyn Williams, 2013-10-22 DIV On the great Pacific discovery expeditions of the long eighteenth century naturalists for the first time were commonly found aboard ships sailing forth from European ports Lured by intoxicating opportunities to discover exotic and perhaps lucrative flora and fauna unknown at home these men set out eagerly to collect and catalogue study and document an uncharted natural world div DIV div DIV This enthralling book is the first to describe the adventures and misadventures discoveries and dangers of this devoted and sometimes eccentric band of explorer scholars Their individual experiences are uniquely their own but together their stories offer a new perspective on the extraordinary era of Pacific exploration and the achievements of an audacious generation of naturalists Historian Glyn Williams illuminates the naturalist s lot aboard ship where danger alternated with boredom and quarrels with the ship s commander were the norm Nor did the naturalist s difficulties end upon returning home where recognition for years of work often proved elusive Peopled with wonderful characters and major figures of Enlightenment science among them Louis Antoine de Bouganville Joseph Banks John Reinhold Forster Captain Cook and Charles Darwin this book is a gripping account of a small group of scientific travelers whose voyages of discovery were to change perceptions of the natural world div

last decades have seen a wide ranging scholarly interest in Cook's voyages focusing on their impact on European and Polynesian societies their scientific results and their protagonists such as Cook himself or the nobleman Joseph Banks who took part in Cook's first voyage of exploration This book examines the hitherto underestimated role of the German scholar Johann Reinhold Forster who together with his son Georg Forster accompanied Cook on his second voyage of exploration 1772-1775 as a principal naturalist For a long time the German traveler has remained a rather shadowy figure of Cook's voyages of exploration and has only attracted scholarly attention occasionally Focusing on the making of knowledge onboard the ship and the islands where it made landfall the study provides a historical reappraisal of Forster's scientific performance as a leading naturalist of his time By examining Forster's Resolution Journal Anne Mariss takes a microhistorical approach toward the making of natural history knowledge during the expedition to the Pacific Mariss unveils the difficulties the traveling naturalists encountered while collecting describing classifying and painting the natural world Her study brings to light the contribution of the various actors who were involved in this undertaking such as the scientific assistants sailors officers and the local actors of the Pacific world

Reassembling the Strange Thomas Anderson, 2018-10-15 This book examines how Westerners understood and processed Madagascar and its environment during the nineteenth century. Madagascar's unique ecosystem crafted its reputation as a strange place full of unusual species. Westerners, however, often minimized Madagascar's peculiar features to stress the commonality of its fauna and flora with the world. The attempt to understand the island through science led to a domestication of its environment that created the image of a tame and known world capable of being controlled and used by Western powers. At the heart of the exploration of Madagascar and its transformation in Western eyes from a strange world to a cash crop colony were missionaries and naturalists who relied upon global experiences to master the island by normalizing the peculiar qualities of Madagascar's environment. This book reveals how the environment played a dominant role in understanding the island and its people and how current environmental debates have evolved from earlier policies and discussions about the environment.

The Giant Squid in Transatlantic Culture Otto Latva, 2023-09-30 This book builds upon the extensive study of the historical relationship between sea animals and humans in transatlantic culture during the eighteenth and nineteenth centuries. It exposes the present understanding of the human relationship with the giant squid not only as too simplistic but also as historically inaccurate. For instance, it redefines the earlier understanding that humans and especially seafarers have understood giant squid as horror-evoking and ugly creatures since the dawn of history and explains the origins of mythical sea monsters such as the Kraken. The book is, however, more than a critical response to previous work. It will point out that animals such as cephalopods, which have largely been defined in biological contexts in recent times, have a fascinating and multivariate past entangled with the history of humans in many remarkable ways. Hence, this book is not just about perceptions of giant-sized squid or cephalopods but a historical inquiry into the transatlantic culture from the late eighteenth century to the turn of the twentieth century. It will provide new knowledge about the history of mollusc studies, seafaring culture, and more broadly of the relationship between humans and animals during the period.
