Burrows,Leanne T Nash,2010-09-11 I first became involved in research into primate behavior and ecology in 1968 over 40 years ago driven by a quest for a better understanding of the natural context of primate evolution At that time it was virtually unknown that primates can exploit exudates as a major food source I was certainly unaware of this myself By good fortune I was awarded a postdoctoral grant to work on lemurs with Jean Jacques Petter in the general ecology division of the Mus um National d Histoire Naturelle in Brunoy France This provided the launching pad for my first field study of lesser mouse lemurs in Madagascar during which I gained my initial inklings of exudate feeding It was also in Brunoy that I met up with Pierre Charles Dominique who introduced me to pioneering observations of exudate feeding he had made during his field study of five lorisiform species in Gabon This opened my eyes to a key feeding adaptation that has now been reported for at least 69 primate species in 12 families Smith Chap 3 almost 20% of extant primate species So exudativory is now firmly established as a dietary category for p mates alongside the long recognized classes of faunivory including insectivory frugivory and folivory Soon after I encountered Charles Dominique he published the first synthetic account of his Gabon field study in a French language journal Charles Dominique 1971 *The American Museum of Natural History and How It Got That Way* Colin Davey,2019-05-14 Tells the story of the building of the American Museum of Natural History and Hayden Planetarium a story of history politics science and exploration including the roles of American presidents New York power brokers museum presidents planetarium directors polar and African explorers and German rocket scientists The American Museum of Natural History is one of New York City s most beloved institutions and one of the largest most celebrated museums in the world Since 1869 generations of New Yorkers and tourists of all ages have been educated and entertained here Located across from Central Park the sprawling structure spanning four city blocks is a fascinating conglomeration of many buildings of diverse architectural styles built over a period of 150 years The first book to tell the history of the museum from the point of view of these buildings including the planned Gilder Center The American Museum of Natural History and How It Got That Way contextualizes them within New York and American
