reasonable quality of product or service to the client thereby meeting or even exceeding the client's requirements. The QA manager is interested in investigating technologies and processes that prevent defects. QA is a staff function. The aim of QA is to apply a planned and systematic production process establishing confidence that the process generates suitable products. QC method is intended to provide regular product inspection thereby guaranteeing the output's correctness, completeness, and integrity. It finds and addresses mistakes. They file and record all the QC procedures. The product or service needs to be suitable and fit for the intended purpose. The methods and processes should decrease errors and shortcomings the first time through the manufacturing process. QC is product oriented; it focuses on tests and inspections carried out at various production line checkpoints. QA is process oriented; its concerns are process definitions, proper selection of tools, proper use of testing methods, and operator training. QC works at locating defects. QA works at preventing them. QC emphasizes testing of products to discover defects and reporting the results to management. QA attempts to improve and stabilize production to minimize or prevent the conditions that trigger defects. Typically, quality control involves problem identification, problem analysis, problem correction, and feedback. Quality assurance involves data collection, problem trend analysis, process identification, process analysis, and process improvement.

Guide to Nondestructive Testing of Concrete G. I. Crawford, 1997. In recent years, significant developments have occurred in concrete testing and in establishing test procedures for nondestructive testing (NDT). With NDT equipment, inspectors can now determine concrete strength, pavement thickness, degree of consolidation, and curing temperatures quickly and accurately. The purpose of this guide is to present general information on several pieces of commercially available NDT equipment. The majority of the equipment covered is used for measuring the early age in situ strength of the concrete at ages less than 28 days.

Industrial Gaseous Leak Detection Manual Orvis M. Knarr, 1998. Gaseous leak detection is an important quality assurance tool in a variety of industrial operations. This volume is devoted to the practical aspects of industrial gaseous leak detection, explaining and illustrating the technology of leak testing, small components as well as large process systems. It explains the techniques of hand probing, fixture design, and integration of computer-controlled production test lines and is written to be accessible to managers and technicians as well as engineers.
