relations and shows their formal properties with respect to established inference axioms Based on the introduction of a novel classification scheme for conditionals he also addresses the question of how to realize and implement the entailment relations obtained In this work Steven Kutsch convincingly presents his ideas provides illustrating examples for them rigorously defines the introduced concepts formally proves all technical results and fully implements every newly introduced inference method in an advanced Java library He significantly advances the state of the art in this field Prof Dr Christoph Beierle of the FernUniversität in Hagen Comics and Videogames Andreas Rauscher, Daniel Stein, Jan-Noël

PC AI. ,1989 From Narratology to Computational Story Composition and Back Leonid Berov,2023-03-15

Although both deal with narratives the two disciplines of Narrative Theory NT and Computational Story Composition CSC rarely exchange insights and ideas or engage in collaborative research The former has its roots in the humanities and attempts to analyze literary texts to derive an understanding of the concept of narrative The latter is in the domain of Artificial Intelligence and investigates the autonomous composition of fictional narratives in a way that could be deemed creative The two disciplines employ different research methodologies at contradistinct levels of abstraction making simultaneous research difficult while a close exchange between the two disciplines would undoubtedly be desirable not least because of the complementary approach to their object of study This book From Narratology to Computational Story Composition and Back describes an exploratory study in generative modeling a research methodology proposed to address the methodological differences between the two disciplines and allow for simultaneous NT and CSC research It demonstrates how implementing narratological theories as computational generative models can lead to insights for NT and how grounding computational representations of narrative in NT can help CSC systems to take over creative responsibilities It is the interplay of these two strands that underscores the feasibility and utility of generative modeling The book is divided into 6 chapters an introduction followed by chapters on plot fictional characters plot quality estimation and computational creativity wrapped up by a conclusion The book will be of interest to all those working in the fields of narrative theory and computational creativity
