Painting The Landscape With Fire Longleaf Pines And Fire Ecology:

Painting the Landscape with Fire Den Latham, 2013-06-25 Fire can be a destructive deadly element of nature capable of obliterating forests destroying homes and taking lives Den Latham's *Painting the Landscape with Fire* describes this phenomenon but also tells a different story one that reveals the role of fire ecology in healthy dynamic forests Fire is a beneficial element that allows the longleaf forests of America's Southeast to survive In recent decades foresters and landowners have become intensely aware of the need to put enough fire on the ground to preserve longleaf habitat for red cockaded woodpeckers quail wild turkeys and a host of other plants and animals *Painting the Landscape with Fire* is a hands on primer for understanding the role of fire in longleaf forests Latham joins wildlife biologists foresters wildfire fighters and others as they band and translocate endangered birds survey snake populations improve wildlife habitat and conduct prescribed burns on public and private lands *Painting the Landscape with Fire* explores the unique Southern biosphere of longleaf forests Throughout Latham beautifully tells the story of the resilience of these woodlands and of the resourcefulness of those who work to see them thrive Fire is destructive in the case of accidents arson or poor policy but with the right precautions and safety measures it is the glowing life force that these forests need

Ignition M.R. O'Connor, 2023-10-17 A work of on the ground reporting into the science of and cultural ideas around wildfires and fire management that challenges the ethos of the conservation movement offering a hopeful vision of the connection between humans and our environment In a riveting investigation of the science and ecology of wildfires journalist M R O Connor ventures into some of the oldest most beautiful and remote forests in North America to explore the powerful and ancient relationship between trees fires and humans Along the way she describes revelatory research in the fields of paleobotany and climate science to show how the world's forests have been shaped by fire for hundreds of millions of years She also reports on the compelling archeological evidence emerging from the field of ethnoecology that proves how until very recently humans were instigators of forest fires actively molding and influencing the ecosystems around them by inserting themselves into the loop of a natural biological process to start good fires As she weaves together first hand reportage with research and cultural insights O Connor also embeds on firelines alongside firefighters and pyrotechnicians These highly trained individuals are resurrecting the practice of prescribed burning in an effort to sustain fire dependent forest ecologies and prevent the catastrophic wildfires that are increasing in frequency and intensity as a result of global warming Hailing from diverse backgrounds including state and federal agencies scientific laboratories and private lands and tribal nations these fire starters are undertaking a radical and often controversial effort to promote protect and expand the responsible use of fire to restore ecological health to landscapes At the heart of *Ignition* is a discussion about risk and how our relationship to it as a society will determine our potential to survive the onslaught of climate change

Twelve Trees Daniel Lewis, 2025-03-11 A compelling global exploration of nature and survival as seen via a dozen species of trees that represent the challenges facing our planet and the ways that

scientists are working urgently to save our forests and our future The world today is undergoing the most rapid environmental transformation in human history from climate change to deforestation Scientists ethnobotanists indigenous peoples and collectives of all kinds are closely studying trees and their biology to understand how and why trees function individually and collectively in the ways they do In *Twelve Trees* Daniel Lewis curator and historian at one of the world's most renowned research libraries travels the world to learn about these trees in their habitats Lewis takes us on a sweeping journey to plant breeding labs botanical gardens research facilities deep inside museum collections to the tops of tall trees underwater and around the Earth journeying into the deserts of the American west and the deep jungles of Peru to offer a globe spanning perspective on the crucial impact trees have on our entire planet When a once common tree goes extinct in the wild but survives in a botanical garden what happens next How can scientists reconstruct lost genomes and habitats How does a tree store thousands of gallons of water or offer up perfectly preserved insects from millions of years ago or root itself in muddy swamps and remain standing How does a 5 000 year old tree manage to live and what can we learn from it And how can science account for the survival of one species at the expense of others To study the science of trees is to study not just the present but the story of the world its past and its future Note species include The Lost Tree of Easter Island *Sophora toromiro* The coast redwood *Sequoia sempervirens* *Hymenaea protera* a fossil tree The Longleaf pine *Pinus palustris* East Indian sandalwood *Santalum album* The Bristlecone pine *Pinus longaeva* West African ebony *Diospyros crassiflora* The Tasmanian blue gum eucalyptus *Eucalyptus globulus* Olive tree *Olea europaea* Baobab *Adansonia digitata* the kapok tree *Ceiba pentandra* The bald cypress *Taxodium distichum*

Travels with George Nathaniel Philbrick, 2022-05-31 NEW YORK TIMES BESTSELLER *Travels with George* is quintessential Philbrick a lively courageous and masterful achievement The Boston Globe Does George Washington still matter Bestselling author Nathaniel Philbrick argues for Washington's unique contribution to the forging of America by retracing his journey as a new president through all thirteen former colonies which were now an unsure nation *Travels with George* marks a new first person voice for Philbrick weaving history and personal reflection into a single narrative When George Washington became president in 1789 the United States of America was still a loose and quarrelsome confederation and a tentative political experiment Washington undertook a tour of the ex colonies to talk to ordinary citizens about his new government and to imbue in them the idea of being one thing Americans In the fall of 2018 Nathaniel Philbrick embarked on his own journey into what Washington called the infant woody country to see for himself what America had become in the 229 years since Writing in a thoughtful first person about his own adventures with his wife Melissa and their dog Dora Philbrick follows Washington's presidential excursions from Mount Vernon to the new capital in New York a monthlong tour of Connecticut Massachusetts New Hampshire and Rhode Island a venture onto Long Island and eventually across Georgia South Carolina and North Carolina The narrative moves smoothly between the eighteenth and twenty first centuries as we see the country through both Washington's and Philbrick's eyes Written at a

moment when America's founding figures are under increasing scrutiny Travels with George grapples bluntly and honestly with Washington's legacy as a man of the people a reluctant president and a plantation owner who held people in slavery At historic houses and landmarks Philbrick reports on the reinterpretations at work as he meets reenactors tour guides and other keepers of history's flame He paints a picture of eighteenth century America as divided and fraught as it is today and he comes to understand how Washington compelled, enticed, stood up to and listened to the many different people he met along the way and how his all-consuming belief in the union helped to forge a nation
