Abstract—This study conducted a systematic literature search across four electronic databases to identify research on the impact of information technology on the business performance of small businesses. The search identified 1,234 articles. After screening titles and abstracts, 1,012 articles were included in the final analysis. The results show that information technology has a positive impact on the business performance of small businesses. The impact is more significant for businesses that use information technology more frequently and for businesses that have a higher level of information technology infrastructure. The study also found that the impact of information technology on business performance is mediated by the adoption of information technology. The study has implications for small business owners and managers, as well as for policymakers and researchers.

- **Reinhold goes:** $\exists x \text{ (Student}(x) \wedge \text{Smart}(x) \wedge \text{Poor}(x))$
- **Wittgenstein goes:** $\exists x \text{ (Smart}(x) \wedge \text{Student}(x) \wedge \text{Poor}(x))$

Wittgenstein is Right. Explanation:

- "There is one way to understand the use of the quantifier $\exists$ in natural language: 'and' and 'or' are symmetric. (Smart and poor) can be understood as (poor and smart) and the order does not matter. But $\exists x \text{ (Smart}(x) \wedge \text{Student}(x) \wedge \text{Poor}(x))$ is not symmetric. It is not the same as $\exists x \text{ (Poor}(x) \wedge \text{Student}(x) \wedge \text{Smart}(x))$."
- Reinhold goes: "Reinhold is right. The order of the quantifier does not matter."
