Surviving and Thriving: How Crops Perceive and Respond to Temperature Stress Zemin Wang,Yi Wang ,Darren Wong,2025-01-27 The dramatic temperature fluctuations spurred by climate change inhibit plant growth and threaten crop productivity Unraveling how plants defend themselves against temperature stress induced cellular impairment is not only a crucial fundamental issue but is also of critical importance for agricultural sustainability and food security Improving crop tolerance to abiotic stress conditions requires a deep understanding of the response of plants to changes in their environment This response is dependent on early and late signal transduction events that involve important signaling molecules such as reactive oxygen species ROS sugars different plant hormones and other signaling molecules It is the integration of these signaling events mediated by an interplay between ROS sugars and different plant hormones that orchestrates the plant response to abiotic stress and drive changes in transcriptomic metabolic and proteomic networks that lead to plant acclimation and survival This Research Topic explores the crops balancing growth and temperature stress responses and how these findings can be used to increase crop quality and yield potential

Literacy in Teacher Preparation and Practice Patrick M. Jenlink,2022-04-01 Today the meaning of literacy what it means to be literate has shifted dramatically Literacy involves more than a set of conventions to be learned either through print or technological formats Rather literacy enables people to negotiate meaning The past decade has witnessed increased attention on multiple literacies and modalities of learning associated with teacher preparation and practice Research recognizes both the increasing cultural and linguistic diversity in the new globalized society and the new variety of text forms from multiple communicative technologies There is also the need for new skills to operate successfully in the changing literate and increasingly diversified social environment Linguists anthropologists educators and social theorists no longer believe that literacy can be defined as a concrete list of skills that people merely manipulate and use Rather they argue that becoming literate is about what people do with literacy the values people place on various acts and their associated ideologies In other words literacy is more than linguistic it is political and social practice that limits or creates possibilities for who people become as literate beings Such understandings of literacy have informed and continue to inform our work

with teachers who take a sociological or critical perspective toward literacy instruction. Importantly, as research indicates, the disciplines pose specialized and unique literacy demands. Disciplinary literacy refers to the idea that we should teach the specialized ways of reading, understanding, and thinking used in each academic discipline, such as science, mathematics, engineering, history, or literature. Each field has its own ways of using text to create and communicate meaning. Accordingly, as children advance through school, literacy instruction should shift from general literacy strategies to the more specific or specialized ones from each discipline. Teacher preparation programs emphasizing different disciplinary literacies acknowledge that old approaches to literacy are no longer sufficient. *Literacy in Teacher Preparation and Practice: Enabling Individuals to Negotiate Meaning* introduces the reader to a collection of thoughtful, research-based works by authors that represent current thinking about literacy across disciplines and the preparation of teachers to enter classrooms. Each chapter focuses on teaching guided by literacies across disciplines and the preparation of teachers who will enter classrooms to instruct the next generation of students.
