

FEMA'S CURRENT AND FUTURE STATE FOR PDA

UPDATE ON TOOLS, PROCESS, AND ACCESS FOR PRELIMINARY DAMAGE ASSESSMENTS

The FEMA Recovery Directorate is developing a broad-based damage assessment process that embraces all levels of emergency management and empowers them with the information and tools necessary to collect, verify, and validate PDAs consistently.

PDA TOOL UPDATES:

- Currently, the PDA team from FEMA Recovery are working to develop technology solutions that promote consistency in data collection between PDAs in a PDA pilot project
- By supporting the procedures outlined in the Damage Assessment Operations Manual for Joint PDAs and validation, these PDAs are being collected utilizing the FEMA Survey 123 Form (ESRI)
- Alongside the Survey 123 Form, two products have also been produced for PDA's: the Smart Form (XLS) and the Data Schema (both for SLTT partners whom do/do not have ESRI accounts)
- Additionally, a PDA Dashboard is in development which will allow for the aggregation of the Damage Assessment data collected and export reports commonly needed to complete a Regional Administrator's Validation and Recommendation (RVAR)
- To date, the FEMA PDA Survey 123 Form has been tested in the following states: Texas, Louisiana, Georgia, New York, California, Nevada, Oklahoma, Michigan, and others
- The PDA Survey 123 Form is currently being tested side by side with traditional methods. By the end of the month the form may be ready to do a standalone test

 This report documents a study of the feasibility of using soundwalls constructed of recycled plastics in place of conventional building materials Important considerations in selecting materials used in this study include environmental impact acoustics aesthetics performance safety and cost Various recycled materials were solicited from commercial manufacturers and subjected to a number of laboratory and field tests These tests include three point bending tests impact hammer excitations and exposure to different types of weather Based on those results several of the most promising materials were selected for construction of a full scale field installation of a test section of a soundwall This field section was monitored for a period of one year for response to environmental factors such as wind and exposure to ultraviolet radiation Analysis of the field structure includes system identification of dynamic characteristics finite element simulation and acoustic performance Results show that noise insertion loss of the soundwall is exceptional Structurally the prototype soundwall performed adequately over the course of the project with only a few members showing detrimental effects from the harsh thermal environment System identification and experimental analysis of test data were successfully implemented and indicate that the prototype soundwall is moderately wind sensitive A finite element model of the soundwall was developed to simulate both static and dynamic response to loads Using methods of modal superposition and random response deflection was predicted for the top of the wall due to application of a strong wind event *California Commissioner of Corporations Current Official Opinions* California.
