Access Pricing in Telecommunications OECD,2004-01-30 This report addresses the regulation of access to telecommunication networks Development of competition and the success of liberalisation often depend on the access terms and conditions chosen and public policy interest in getting these terms and conditions right is important **Governance of Communication Networks** Brigitte Preissl,Jürgen Müller,2007-01-30 Few would doubt the potential of information technology to connect individuals firms and organisations Whether this will actually lead to the integration of markets and societies is a different issue The articles collected in this book shed light on crucial considerations for the success of global communication networks These include frameworks for regulation inclusion of customers in defining product and service strategies access to advanced technology and networks for all groups and more OECD Review of Telecommunication Policy and Regulation in Colombia OECD,2014-04-09 This report reviews policies and regulations in the telecommunication service sector in Colombia It puts forward recommendations aimed at furthering regulatory reform and stimulating market competition and investment in the sector **Competition and Investment in Telecommunications and Media Markets** Roberto Balmer,2014-01-20 This book reviews the economic literature on cooperative investment in next generation broadband networks and geographic regulation It additionally proposes innovative models for estimating the level of competition and investment in the fixed telephony market and the retail market for newspapers In doing so it addresses two hotly debated issues in business strategy and economic policy the determinants of investment and competition and the impacts of innovative investment schemes The first chapter reviews the literature on new cooperative investment schemes in next generation broadband networks and geographic regulation The effects on competition investment and welfare of such schemes crucially depend on the details of the agreements For instance in the case of joint ventures the manner in which investment costs are shared and internal and external access prices are determined significantly impacts the outcome In the case of long term access agreements it is essential to consider how access tariffs are structured whether they can adapt to market developments ex post and whether contracts are signed before or after the investment takes place Generally many of these agreements allow for some extent of risk sharing offering the possibility of increasing investment incentives when firms are not risk neutral It is suggested that regulators consider introducing regulated co investment agreements complementing current regulation in addition to considering geographically segmented access prices The second chapter assesses entry and competition in local retail markets for newspapers It builds on the new empirical industrial organisation NEIO literature to estimate sustainable coverage and competitive effects of entry for Swiss newspaper sellers which sell composite goods newspapers food and other goods of daily use An entry threshold ratio methodology is used allowing for model estimation even when the range of products under examination is not exactly defined and when price and quantity data are not available It is found that under duopoly prices the market size of a Commune required for single firm entry is about twice as large as

under monopoly prices A clear and quantifiable trade off between competition and investment therefore exists Moreover it is found that while a second entrant in this market strongly increases competition further entry doesn't have a significant additional competitive effect From a welfare perspective therefore it can be stated that two is enough to ensure competition in this market In the third chapter competition and market strategies in the Swiss fixed telephony market are assessed A market model based on a generalised version of the traditional dominant firm competitive fringe model is developed Direct estimation of the incumbent's intertemporal residual demand function is performed by instrumenting the market price with incumbent specific cost shifting variables as well as other variables The concrete estimates show that residual retail demand for voice traffic is highly inelastic Such a level of elasticity is only compatible with a profit maximising incumbent in the case of largely competitive conduct It is therefore found that the Swiss incumbent acted largely competitively and that current regulated telephony retail price caps could not be justified on the basis of a lack of competition

The Economics of Antitrust and Regulation in Telecommunications Pierre A. Buigues, Patrick Rey, 2004-01-01 Contributing to a convergence of legal and economic approaches The Economics of Antitrust and Regulation in Telecommunications integrates economic theory into current EU antitrust policy within the sector The book addresses the role of competition and regulatory policies on a number of key issues in telecommunications such as market definition collective dominance access to networks and allocation of scarce resources

Adoption, Usage, and Global Impact of Broadband Technologies: Diffusion, Practice and Policy Dwivedi, Yogesh K., 2010-10-31 This book provides a comprehensive coverage of broadband deployment diffusion adoption usage and policies as they have been realized by research in many countries around the world Provided by publisher

The Liberalisation of the Telecommunications Sector in Sub-Saharan Africa and Fostering Competition in Telecommunications Services Markets Rachel Alemu, 2018-02-02 This study investigates whether the existing regulatory framework governing the telecommunications sector in countries in Sub Saharan Africa effectively deals with emerging competition related concerns in the liberalised sector Using Uganda as a case study it analyses the relevant provisions of the law governing competition in the telecommunications sector and presents three key findings Firstly while there is comprehensive legislation on interconnection and spectrum management inefficient enforcement of the legislation has perpetuated concerns surrounding spectrum scarcity and interconnection Secondly the legislative framework governing anti competitive behaviour though in line with the established principles of competition law is not sufficient Specifically the framework is not equipped to govern the conduct of multinational telecommunications groups that have a strong presence in the telecommunications sector Major factors hampering efficient competition regulation include Uganda's sole reliance on sector specific competition rules restricted available remedies and a regulator with limited experience of enforcing competition legislation The weaknesses in the framework strongly suggest the need to adopt an economy wide competition law Lastly wireless technology is the main means through which the population in Uganda accesses telecommunications

services Greater emphasis should be placed on regulating conduct in the wireless communications markets *Media Ownership and Concentration in America* Eli M. Noam, 2009-10-19 The concentration of private power over media has been the subject of intense public debate around the world Critics have long feared waves of mergers creating a handful of large media firms that would hold sway over public opinion and endanger democracy and innovation But others believe with equal fervor that the Internet and deregulation have opened the media landscape significantly How concentrated has the American information sector really become What are the facts about American media ownership In this contentious environment Eli Noam provides a comprehensive and balanced survey of media concentration with a methodical scientific approach He assembles a wealth of data from the last 25 years about mass media such as radio television film music and print publishing as well as the Internet telecommunications and media related information technology After examining 100 separate media and network industries in detail Noam provides a powerful summary and analysis of concentration trends across industries and major media sectors He also looks at local media power vertical concentration and the changing nature of media ownership through financial institutions and private equity The results reveal a reality much more complex than the one painted by advocates on either side of the debate They show a dynamic system that fluctuates around long term concentration trends driven by changing economics and technology *Media Ownership and Concentration in America* will be essential reading and a trove of information for scholars and students in media telecommunications IT economics and the history of business as well as media industry professionals business researchers and policy makers around the world Critics and defenders of media trends alike will find much that confirms and refutes their world view But the next round of their debate will be shaped by the facts presented in this book **EU Competition Law, Data Protection and Online**

Platforms: Data as Essential Facility Inge Graef, 2016-10-17 All are agreed that the digital economy contributes to a dynamic evolution of markets and competition Nonetheless concerns are increasingly raised about the market dominance of a few key players Because these companies hold the power to drive rivals out of business regulators have begun to seek scope for competition enforcement in cases where companies claim that withholding data is needed to satisfy customers and cut costs This book is the first focus on how competition law enforcement tools can be applied to refusals of dominant firms to give access data on online platforms such as search engines social networks and e commerce platforms commonly referred to as the gatekeepers of the Internet The question arises whether the denial of a dominant firm to grant competitors access to its data could constitute a refusal to deal and lead to competition law liability under the so called essential facilities doctrine according to which firms need access to shared knowledge in order to be able to compete A possible duty to share data with rivals also brings to the forefront the interaction of competition law with data protection legislation considering that the required information may include personal data of individuals Building on the refusal to deal concept and using a multidisciplinary approach the analysis covers such issues and topics as the following data portability interoperability data as

a competitive advantage or entry barrier in digital markets market definition and dominance with respect to data disruptive versus sustaining innovation role of intellectual property regimes economic trade off in essential facilities cases relationship of competition enforcement with data protection law and data related competition concerns in merger cases The author draws on a wealth of relevant material including EU and US decision making practice case law and policy documents as well as economic and empirical literature on the link between competition and innovation The book concludes with a proposed framework for the application of the essential facilities doctrine to potential forms of abuse of dominance relating to data In addition it makes suggestions as to how data protection interests can be integrated into competition policy An invaluable contribution to ongoing academic and policy discussions about how data related competition concerns should be addressed under competition law the analysis clearly demonstrates how existing competition tools for market definition and assessment of dominance can be applied to online platforms It will be of immeasurable value to the many jurists business persons and academics concerned with this very timely subject

U.S. Freight Rail Economics and Policy Jeffrey Macher, John Mayo, 2019-04-25 The passage of the Staggers Rail Act in 1980 led brought a renaissance to the freight rail industry In the decade following economists documented the effects of the Act on a variety of important economic metrics including prices costs and productivity Over the preceding years and with the return of the industry to more stable footing attention to the industry by economists faded The lack of attention however has not been due to a dearth of ongoing economic and policy issues that continue to confront the industry In this volume we begin to rectify this inattention Rather than retread older analyses or provide yet another look at the consequences of Staggers we assemble a collection of ten chapters in four sections that collectively provide fresh and up to date analyses of the economic issues and policy challenges the industry faces the first section sets the context through foundational discussion of freight rail the second section highlights the role of freight rail in an increasingly interrelated economy the third section examines industry structure and scope in freight rail and the fourth section assesses current regulatory challenges that confront freight rail This book will be of great value to researchers academics policymakers and students interested in the fields of freight rail economics and policy transportation business history and regulatory economics

Promoting Competition in Innovation Through Merger Control in the ICT Sector Kalpana Tyagi, 2019-06-21 This book addresses the question of how competition authorities assess mergers in the Information Communication Technology ICT sector so as to promote competition in innovation A closer look at the question reveals that it is far more complex and difficult to answer for the ICT telecommunications and multi sided platform MSP economy than for more traditional sectors of the economy This has led many scholars to re think and question whether the current merger control framework is suitable for the ICT sector which is often also referred to as the new economy The book pursues an interdisciplinary approach combining insights from law economics and corporate strategy Further it has a comparative dimension as it discusses the practices of the US the EU and wherever relevant of other competition authorities from around the globe Considering that the research was conducted in the EU the practices of the European Commission remain a key aspect of the content Considering its normative dimension the book concentrates on the substantive aspects of merger control To facilitate a better understanding of the most important points the book also offers a brief overview of the procedural aspects of merger control in the EU the US and the UK and discusses recent amendments to Austrian and German law regarding the notification threshold Given its scope the book offers an invaluable guide for competition law scholars practitioners in the field and competition authorities worldwide

Internet Governance and the Global South A. Bhuiyan, 2014-05-29 A welcome addition to Palgrave s Global Media Policy and Business series Internet Governance and the Global South documents the role of the global south in Internet policymaking and challenges the globalization theories that declared the death of the state in global decision making Abu Bhuiyan argues that the global Internet politics is primarily a conflict between the states the United States of America and the states of the global south because the former controls Internet policymaking The states of the global south have been both oppositional and acquiescing to the sponsored policies of the United States on Internet issues such as digital divide multilingualism intellectual property rights and cyber security They do not oppose the neoliberal underpinnings of the policies promoted by the United States but ask for an international framework to govern the Internet so that they can work as equal partners in setting norms for the global Internet
