Advances in Production Management Systems: New Challenges, New Approaches Bruno Vallespir, Thècle Alix, 2010-10-15. The present economic and social environment has given rise to new situations within which companies must operate. As a first example, the globalization of the economy and the need for performance has led companies to outsource and then to operate inside networks of enterprises such as supply chains or virtual enterprises. A second instance is related to environmental issues. The statement about the impact of industrial activities on the environment has led companies to revise processes to save energy to optimize transportation. A last example relates to knowledge. Knowledge is considered today to be one of the main assets of a company. How to capitalize to manage to reuse it for the benefit of the company is an important current issue. The three examples above have no direct links. However, each of them constitutes a challenge that companies have to face today. This book brings together the opinions of several leading researchers from all around the world. Together, they try to develop new approaches and find answers to those challenges. Through the individual chapters of this book, the authors present their understanding of the different challenges, the concepts on which they are working, the approaches they are developing, and the tools they propose. The book is composed of six parts, each one focuses on a specific theme and is subdivided into subtopics.

Resilient Smart Farming Franz Kuntke, 2024-05-03 Like many sectors agriculture is experiencing a continuous digitalization i.e. an increase in data driven technologies used In contrast to companies of other critical infrastructures a typical farm is comparatively small and often runs as a family business Accordingly the demands on farming technology its implementation and regulations are different in many terms Currently a promising technological trend of agriculture is smart farming that incorporates more precise cultivation with less manual effort But such new developments usually lack an assessment about its impact on the sector's resilience and dependencies on other infrastructures It remains unclear how digitalization impacts the resilience of food production and food safety Therefore it is not well researched which technological developments may lead to undesired effects in the future How modern systems should be designed to allow for both positive impacts on efficiency and prevention of negative effects in terms of reduced resilience capacities is also not answered by current literature The aim of the work is to close this research gap in the interplay between agriculture digitalization and resilience
