Management Of Transboundary Water Resources Under Scarcity: A Multidisciplinary Approach Ariel

Dinar,Yacov Tsur,2017-03-17 Water scarcity due to climate change population growth and economic development is a critical issue in many semi arid and arid regions around the world Water scarcity is especially critical in regions where water is shared by several riparian states and used for competing purposes irrigation domestic industry environment and hydropower There is evidence that water scarcity may give rise to conflicts among the riparian states that share water basins At the same time there is evidence that proper arrangements among riparian states create a basis for cooperation which is a necessary condition for economic development food production environmental sustainability and poverty reduction This book presents a collection of work presented by a group of academics and policy experts dealing with the impact of water scarcity and variability on the ability to jointly manage shared water and the derived welfare of international states and nations sharing international river basins consisting of economics technology law and institutions geography and international relations The book covers theoretical aspects of management of transboundary water as well as case studies from hotspots around the world The unique aspect of this book is the multidisciplinary nature of the chapters reflecting a new field of research that will gain popularity as water scarcity will increase over time and across regions The chapters from the book were presented at the Management of Transboundary Water Resources under Scarcity Perspectives on Agriculture and Food Security workshop held at The Hebrew University of Jerusalem Israel from June 22 to 23 2015 *Threat Multiplier* Sherri Goodman,2024-08-27 Threat Multiplier takes us onto the battlefield and inside the Pentagon to show how the US military is confronting the biggest security risk in global history climate change More than thirty years ago when Sherri Goodman became the Pentagon s first Chief Environmental Officer no one would have imagined this role for our armed forces Indeed for much of the twentieth century the Department of Defense DOD was better known for containing the Soviet nuclear threat than protecting the environment And yet today the military has moved from an environmental laggard to a clean energy and climate leader recognizing that a warming world exacerbates every threat from hurricanes and forest fires to competition for increasingly scarce food and water to terrorism and power plays by Russia and China The Pentagon now considers climate in war games disaster relief planning international diplomacy and even the design of its own bases What was the key to this dramatic change in military thinking What keeps today s generals and admirals up at night How can we safeguard our national defense and our planet No one is better poised to answer these questions than Sherri Goodman who was at the vanguard of environmental leadership among our armed forces and civilian representatives In Threat Multiplier she tells the inside story of the military s fight for global security a tale that is as hopeful as it is harrowing Shared Borders, Shared Waters Sharon B. Megdal,Robert G. Varady,Susanna Eden,2012-12-18 This collection of papers examines water management in two

of the world's prominent arid transboundary areas facing similar challenges. In the Middle East, the chronically water short Israeli-Palestinian region has recognized the need both to conserve and supplement its traditional water sources. Across the globe, on the North American continent, Arizona, a state in the southwestern United States bordering Mexico, relies significantly on the overallocated Colorado River as well as on non-renewable groundwater supplies. For both regions, sustainable and cost-effective solutions clearly require innovative, multifaceted and conflict-avoiding approaches. This volume is predicated on the role that science diplomacy can play in resolving difficult water-related issues. The history of natural resources disputes confirms that the scientific approach can reveal ways to overcome division. Experience has shown that scientifically trained experts who are sensitive to sociopolitical conditions can assist in developing and evaluating feasible water management solutions. The insights and expertise of a distinguished and diverse group of researchers fill these chapters. Contributors include established authorities as well as a number of budding scholars. In a field traditionally dominated by males and by engineers, this collection benefits from significant gender diversity and contributions from a broad spectrum of disciplines. Policymakers, water managers, specialists such as university researchers and consultants, and citizens all have an interest in finding sustainable strategies to address the many water management issues discussed in this volume. The assembled papers underscore that much work remains to be done.

Adaptation to Climate Change through Water Resources Management Dominic Stucker, Elena Lopez-Gunn, 2014-08-27

The impacts of human-induced climate change are largely mediated by water, such as alterations in precipitation and glacial melt patterns, variations in river flow, increased occurrence of droughts and floods, and sea level rise in densely populated coastal areas. Such phenomena impact both urban and rural communities in developed, emerging and developing countries. Taking a systems approach, this book analyzes evidence from 26 countries and identifies common barriers and bridges for local adaptation to climate change through water resources management. It includes a global set of case studies from places experiencing increased environmental and social pressure due to population growth, development and migration, including in Africa, Asia, Australia, Europe, North and South America. All chapters consider the crosscutting themes of adaptive capacity, equity and sustainability. These point to resilient water allocation policies and practices that are capable of protecting social and environmental interests whilst ensuring the efficient use of an often scarce resource.
