Machine Learning for Healthcare Systems C. Karthik Chandran,M. Rajalakshmi,Sachi Nandan Mohanty,Subrata Chowdhury,2023-09-22 The introduction of digital technology in the healthcare industry is marked by ongoing difficulties with implementation and use Slow progress has been made in unifying different

healthcare systems and much of the world still lacks a fully integrated healthcare system. The intrinsic complexity and development of human biology as well as the differences across patients have repeatedly demonstrated the significance of the human element in the diagnosis and treatment of illnesses. But as digital technology develops, healthcare providers will undoubtedly need to use it more and more to give patients the best treatment possible. The extensive use of machine learning in numerous industries, including healthcare, has been made possible by advancements in data technologies, including storage capacity, processing capability, and data transit speeds. The need for a personalized medicine or precision medicine approach to healthcare has been highlighted by current trends in medicine due to the complexity of providing effective healthcare to each individual. Personalized medicine aims to identify, forecast, and analyze diagnostic decisions using vast volumes of healthcare data so that doctors may then apply them to each unique patient. These data may include but are not limited to information on a person's genes or family history, medical imaging data, drug combinations, patient health outcomes at the community level, and natural language processing of pre-existing medical documentation. This book provides various insights into machine learning techniques in healthcare system data and its analysis. Recent technological advancements in the healthcare system represent cutting-edge innovations and global research successes in performance modelling, analysis, and applications.

Machine Learning in Medicine - a Complete Overview Ton J. Cleophas, Aeilko H. Zwinderman, 2015-03-27. The current book is the first publication of a complete overview of machine learning methodologies for the medical and health sector. It was written as a training companion and as a must-read not only for physicians and students but also for any one

involved in the process and progress of health and health care In eighty chapters eighty different machine learning methodologies are reviewed in combination with data examples for self assessment Each chapter can be studied without the need to consult other chapters The amount of data stored in the world s databases doubles every 20 months and clinicians familiar with traditional statistical methods are at a loss to analyze them Traditional methods have indeed difficulty to identify outliers in large datasets and to find patterns in big data and data with multiple exposure outcome variables In addition analysis rules for surveys and questionnaires which are currently common methods of data collection are essentially missing Fortunately the new discipline machine learning is able to cover all of these limitations So far medical professionals have been rather reluctant to use machine learning Also in the field of diagnosis making few doctors may want a computer checking them are interested in collaboration with a computer or with computer engineers Adequate health and health care will however soon be impossible without proper data supervision from modern machine learning methodologies like cluster models neural networks and other data mining methodologies Each chapter starts with purposes and scientific questions Then step by step analyses using data examples are given Finally a paragraph with conclusion and references to the corresponding sites of three introductory textbooks previously written by the same authors is given
