HOW A COMPUTER WORKS

Error! Hyperlink reference not valid.

What is a computer input device? An input device is a device when the data receives information from another computer.

An output device is the opposite of an input device where the computer receives the information but not with the output device, the output device is the data where the information has been sent to another device such as another computer or printer.

The storage device is any sort of device that saves your work or information to that device so you can go back later and find it.

What is an input/output system? An input/output system is a sort of system that lets you communicate through the computer with the outside world with another human being.

INTERNAL PARTS

The power supply is where the power is used. So if you need to charge your computer than

You just need to plug it into the wall and the computer and there is power.

The audio/video card is another important piece of equipment for the computer because it provides you with sound that comes from the computer as well as speakers.

The CPU is a manger part of the computer because it is practically the brains of the computer. It does all the thinking for you and it tells the computer what to do really.
