Advances in Evolutionary Computing Ashish Ghosh, Shigeyoshi Tsutsui, 2012-12-06 The term evolutionary computing refers to the study of the foundations and applications of certain heuristic techniques based on the principles of natural evolution thus the aim of designing evolutionary algorithms EAs is to mimic some of the processes taking place in natural evolution These algorithms are classified into three main categories depending more on historical development than on major functional techniques In fact their biological basis is essentially the same Hence EC GA uGP u ES uEP EC Evolutionary Computing GA Genetic Algorithms GP Genetic Programming ES Evolution Strategies EP Evolutionary Programming Although the details of biological evolution are not completely understood even nowadays there is some strong experimental evidence to support the following points Evolution is a process operating on chromosomes rather than on organisms Natural selection is the mechanism that selects organisms which are well adapted to

the environment to reproduce more often than those which are not. The evolutionary process takes place during the reproduction stage that includes mutation which causes the chromosomes of offspring to be different from those of the parents and recombination which combines the chromosomes of the parents to produce the offspring. Based upon these features, the previously mentioned three models of evolutionary computing were independently and almost simultaneously developed. An evolutionary algorithm (EA) is an iterative and stochastic process that operates on a set of individuals called a population.

Evolutionary Algorithms for Solving Multi-Objective Problems Carlos A. Coello Coello, David A. Van Veldhuizen, Gary B. Lamont, 2002. The solving of multi-objective problems (MOPs) has been a continuing effort by humans in many diverse areas including computer science, engineering, economics, finance, industry, physics, chemistry, and ecology among others. Many powerful and deterministic and stochastic techniques for solving these large dimensional optimization problems have arisen out of operations research, decision science, engineering, computer science, and other related disciplines. The explosion in computing power continues to arouse extraordinary interest in stochastic search algorithms that require high computational speed and very large memories. A generic stochastic approach is that of evolutionary algorithms (EA). Such algorithms have been demonstrated to be very powerful and generally applicable for solving different single objective problems. Their fundamental algorithmic structures can also be applied to solving many multi-objective problems. In this book, the various features of multi-objective evolutionary algorithms (MOEAs) are presented in an innovative and unique fashion with detailed customized forms suggested for a variety of applications. Also, extensive MOEA discussion questions and possible research directions are presented at the end of each chapter. Evolutionary Optimization Ruhul Sarker, Masoud Mohammadian, Xin Yao, 2002-01-31. The use of evolutionary computation techniques has grown considerably over the past several years. Over this time, the use and applications of these techniques have been further enhanced, resulting in a set of computational intelligence, also known as modern heuristics, tools that are particularly adept for solving complex optimization problems. Moreover, they are characteristically more robust than traditional methods based on formal logics or mathematical programming for many real-world OR/MS problems. Hence, evolutionary computation techniques have dealt with complex optimization problems better than traditional optimization techniques, although they can be applied to easy and simple problems where conventional techniques work well. Clearly, there is a need for a volume that both reviews state-of-the-art evolutionary computation techniques and surveys the most recent developments in their use for solving complex OR/MS problems. This volume on *Evolutionary Optimization* seeks to fill this need. *Evolutionary Optimization* is a volume of invited papers written by leading researchers in the field. All papers were peer-reviewed by at least two recognized reviewers. The book covers the foundation as well as the practical side of evolutionary optimization.

Biogeography-based Optimization for Combinatorial Problems and Complex Systems Dawei Du, Cleveland State

University. Department of Electrical and Computer Engineering, OhioLINK Electronic Theses and Dissertations Center, 2014

Abstract Biogeography based optimization BBO is a heuristic evolutionary algorithm that has shown good performance on many problems In this dissertation three problems are researched for BBO convergence speed and optimal solution convergence of BBO 1 BBO application to combinatorial problems and BBO application to complex systems The first problem is to analyze BBO from two perspectives how the components of BBO affect its convergence speed and the reason that BBO converges to the optimal solution For the first perspective which is convergence speed we analyze the two essential components of BBO population construction and information sharing For the second perspective a mathematical BBO model is built to theoretically prove why BBO is capable of reaching the global optimum for any problem In the second problem addressed by the dissertation BBO is applied to combinatorial problems Our research includes the study of migration local search population initialization and greedy methods for combinatorial problems We conduct a series of simulations based on four benchmarks the sizes of which vary from small to extra large The simulation results indicate that when combined with other techniques the performance of BBO can be significantly improved Also a BBO graphical user interface GUI is created for combinatorial problems which is an intuitive way to experiment with BBO algorithms including hybrid BBO algorithms The third and final problem addressed in this dissertation is the optimization of complex systems We invent a new algorithm for complex system optimization based on BBO which is called BBO complex Four real world problems are used to test BBO Complex and compare with other complex system optimization algorithms and we obtain encouraging results from BBO Complex Then a Markov model is created for BBO Complex Simulation results are provided to confirm the model

Theory of Evolutionary Computation Benjamin Doerr, Frank Neumann, 2019-11-20 This edited book reports on recent developments in the theory of evolutionary computation or more generally the domain of randomized search heuristics It starts with two chapters on mathematical methods that are often used in the analysis of randomized search heuristics followed by three chapters on how to measure

the complexity of a search heuristic black box complexity a counterpart of classical complexity theory in black box optimization parameterized complexity aimed at a more fine grained view of the difficulty of problems and the fixed budget perspective which answers the question of how good a solution will be after investing a certain computational budget The book then describes theoretical results on three important questions in evolutionary computation how to profit from changing the parameters during the run of an algorithm how evolutionary algorithms cope with dynamically changing or stochastic environments and how population diversity influences performance Finally the book looks at three algorithm classes that have only recently become the focus of theoretical work estimation of distribution algorithms artificial immune systems and genetic programming Throughout the book the contributing authors try to develop an understanding for how these methods work and why they are so successful in many applications The book will be useful for students and researchers in theoretical computer science and evolutionary computing

Parameter Setting in Evolutionary Algorithms F.J. Lobo, Cláudio F. Lima, Zbigniew Michalewicz, 2007-04-03 One of the main difficulties of applying an evolutionary algorithm or as a matter of fact any heuristic method to a given problem is to decide on an appropriate set of parameter values Typically these are specified before the algorithm is run and include population size selection rate operator probabilities not to mention the representation and the operators themselves This book gives the reader a solid perspective on the different approaches that have been proposed to automate control of these parameters as well as understanding their interactions The book covers a broad area of evolutionary computation including genetic algorithms evolution strategies genetic programming estimation of distribution algorithms and also discusses the issues of specific parameters used in parallel implementations multi objective evolutionary algorithms and practical consideration for real world applications It is a recommended read for researchers and practitioners of evolutionary computation and heuristic methods
