Ancient Geopolymers in South America and Easter Island Joseph Davidovits, 2024-12-16 This book presents the study on Ancient Geopolymers in South America and Easter Island regions exploring the artificial nature of the volcanic rocks used in the construction of Easter Island's statues. Contrary to the belief that the statues were carved and transported, Davidovits suggests they were made on site using geopolymer technology. He proposes that this knowledge came from Amerindians from the Andes, specifically the Tiahuanaco region near Lake Titicaca. The book is divided into two parts: the first examines geopolymeric artificial stone technologies in the Andes, and the second establishes a connection between these technologies and Easter Island, 3,700 km away. Davidovits' research includes geological expeditions, SEM analysis, petrography, and a comprehensive review of international literature. It is intriguing to observe that in both cases, Pumapunku/Tiwanaku in the Andes and Easter Island volcanic rocks are involved, which contain biological carbon. These discoveries undeniably support the theory of geopolymeric artificial manufacturing, challenging traditional archaeological views. *Geopolymers* J. L. Provis, J. S. J. van Deventer, 2009-06-22 A geopolymer is a solid aluminosilicate material usually formed by alkali hydroxide or alkali silicate activation of a solid precursor such as coal fly ash, calcined clay, and/or metallurgical slag. Today, the primary application of geopolymer technology is in the development of reduced CO₂ construction materials as an alternative to Portland-based cements. *Geopolymers: structure, processing, properties and industrial applications* reviews the latest research on and applications of these highly important materials. Part one discusses the synthesis and characterisation of geopolymers with chapters on topics such as fly ash chemistry and inorganic polymer cements, geopolymer precursor design, nanostructure, microstructure of metakaolin and fly ash geopolymers, and geopolymer synthesis kinetics. Part two reviews the manufacture and properties of geopolymers, including accelerated ageing of geopolymers, chemical durability, engineering properties of geopolymer concrete, producing fire and heat-resistant geopolymers, utilisation of mining wastes, and thermal properties of geopolymers. Part three covers applications of geopolymers with coverage of topics such as commercialisation of geopolymers for construction as well as applications in waste management. With its distinguished editors and international team of contributors, *Geopolymers: structure, processing, properties and industrial applications* is a standard reference for scientists and engineers in industry and the academic sector, including practitioners in the cement and concrete industry as well as those involved in waste reduction and disposal. It discusses the synthesis and characterisation of geopolymers with chapters covering fly ash chemistry and inorganic polymer cements. It assesses the application and commercialisation of geopolymers with particular focus on applications in waste management. It reviews the latest research on and applications of these highly important materials. **Geopolymers** John L. Geopolymer '88 Joseph Davidovits, Joseph Orlinski, 1988 **Geopolymers** Vikas Mittal, 2019-01-31 Geopolymers are a new class of binder materials and are generally classified as pure inorganic geopolymers and organic containing geopolymers Geopolymers are multi functional materials with applications in a large variety of scientific and industrial disciplines Significant advancements have been made in the recent years regarding tuning of structures to meet the required set of properties so as to achieve specific applications In this respect the book aims to summarize synthesis properties and applications of various advanced geopolymer systems The wealth of information about synthesis and commercialization of many commercially relevant geopolymers makes the book a valuable asset for a diverse audience ranging from materials chemical and process engineers as well as practicing scientists in academia and industry to postgraduate university students in various engineering disciplines For more details please visit <https://centralwestpublishing.com> **Directory of Published Proceedings**, 1991 [Index of Conference Proceedings](#), 1990 **Geopolymers** Petrica Vizureanu, Mohd Mustafa Al Bakri Abdullah, Rafiza Abdul Razak, Dumitru Doru Burduhos-Nergis, Liew Yun-Ming, Andrei Victor Sandu, 2023-11-22 Geopolymers presents a complex and interdisciplinary study in the fields of physics chemistry materials science and civil engineering on oxide materials based on mineral wastes known as geopolymers Considering the ideal requirements for developing eco friendly materials for industrial applications this book describes how to design and develop different types of geopolymers that use mineral wastes or natural aluminosilicates as raw materials It contains advanced knowledge and information regarding geopolymer manufacturing development characterization and applications in soil stabilization civil engineering or ceramics This book is relevant for undergraduate and graduate students conducting fundamental and applied research in the fields of materials engineering ceramics engineering and water processing [Green Processing 2006](#), 2006

International Aerospace Abstracts, 1996 **Geopolymer Concrete** Kiran Kumar Poloju, Kota Srinivasu, 2025-03-05 This book discusses geopolymer concrete an innovative and sustainable alternative to traditional Portland cement concrete

Geopolymer concrete is synthesized through the chemical reaction between industrial byproducts such as fly ash or blast furnace slag and alkaline activators. It offers environmental sustainability by utilizing industrial waste materials as its main components, reducing carbon footprint and resource depletion. The production process of geopolymer concrete further contributes to its eco-friendly profile as it can be cured at ambient temperatures or with minimal heat input, significantly lowering energy consumption and greenhouse gas emissions. The chemistry of geopolymer involves the dissolution of aluminosilicate materials in a highly alkaline environment, followed by the condensation and reorganization of silica and alumina species to form a three-dimensional network structure. The research on geopolymer concrete is important for several reasons. First, it provides a sustainable alternative to traditional Portland cement concrete, which has significant environmental impacts due to its high carbon dioxide emissions, resource depletion, and energy consumption. Second, geopolymer concrete offers enhanced durability and resistance to chemical attacks, making it a suitable material for various construction applications. Lastly, the use of industrial byproducts in geopolymer concrete production reduces waste and conserves natural resources, promoting circular economy principles in the construction industry.
