Accelerator Programming Using Directives Sandra Wienke,Sridutt Bhalachandra,2020-06-24 This book constitutes the refereed post conference proceedings of the 6th International Workshop on Accelerator Programming Using Directives WACCPD 2019 held in Denver CO USA in November 2019 The 7 full papers presented have been carefully reviewed and selected from 13 submissions The papers share knowledge and experiences to program emerging complex parallel computing systems They are organized in the following three sections porting scientific applications to heterogeneous architectures using directives directive based programming for math libraries and performance portability for heterogeneous architectures Image Processing Using FPGAs Donald Bailey,2019-06-11 This book presents a selection of papers representing current research on using field programmable gate arrays FPGAs for realising image processing algorithms These papers are reprints of papers selected for a Special Issue of the Journal of Imaging on image processing using FPGAs A diverse range of topics is covered including parallel soft processors memory management image filters segmentation clustering image analysis and image compression Applications include traffic sign recognition for autonomous driving cell detection for histopathology and video compression Collectively they represent the current state of the art on image processing using FPGAs **GPU Parallel Program Development Using CUDA** Tolga Soyata,2018-01-19 GPU Parallel Program Development using CUDA teaches GPU programming by showing the differences among different families of GPUs This approach prepares the reader for the next generation and future generations of GPUs The book emphasizes concepts

that will remain relevant for a long time rather than concepts that are platform specific At the same time the book also provides platform dependent explanations that are as valuable as generalized GPU concepts The book consists of three separate parts it starts by explaining parallelism using CPU multi threading in Part I A few simple programs are used to demonstrate the concept of dividing a large task into multiple parallel sub tasks and mapping them to CPU threads Multiple ways of parallelizing the same task are analyzed and their pros cons are studied in terms of both core and memory operation Part II of the book introduces GPU massive parallelism The same programs are parallelized on multiple Nvidia GPU platforms and the same performance analysis is repeated Because the core and memory structures of CPUs and GPUs are different the results differ in interesting ways The end goal is to make programmers aware of all the good ideas as well as the bad ideas so readers can apply the good ideas and avoid the bad ideas in their own programs Part III of the book provides pointer for readers who want to expand their horizons It provides a brief introduction to popular CUDA libraries such as cuBLAS cuFFT NPP and Thrust the OpenCL programming language an overview of GPU programming using other programming languages and API libraries such as Python OpenCV OpenGL and Apple s Swift and Metal and the deep learning library cuDNN

The History of the GPU - Eras and Environment Jon Peddie, 2023-01-01 This is the second book in a three part series that traces the development of the GPU which is defined as a single chip with an integrated transform and lighting T the GPU was ready to emerge Several of the companies involved did produce an integrated GPU but not until early 2000 This is the account of those companies the GPU and the environment needed to support it The GPU has become ubiquitous and can be found in every platform that involves a computer and a user interface
