Innovations and Interdisciplinary Solutions for Underserved Areas Cheikh M.F. Kebe, Assane Gueye, Ababacar Ndiaye, Aminata Garba, 2018-08-29 This book constitutes the refereed post conference proceedings of the Second International Conference on Innovations and Interdisciplinary Solutions for Underserved Areas InterSol 2018 and the 7th Colloque National sur la Recherche en Informatique et ses Applications CNRIA 2018 held in Kigali Rwanda in March 2018. The 23 papers presented were selected from 56 submissions and issue the following themes: papers dealing with the evolution of performances of solar systems in Africa; papers addressing the issues in public health; telecom papers studying the business model of telecommunication; math models presenting the climatic phenomenon; and finally health papers dealing with medical devices that are suitable to underserved areas. The proceedings also contain 7 papers from the co-located 7th CNRIA Colloque National sur la Recherche en Informatique et ses Applications focusing on network architecture and security, software engineering, data management, and signal processing.

Systems Benchmarking Samuel Kounev, Klaus-Dieter Lange, J  akim von Kistowski, 2025-03-21 This book serves as both a textbook and handbook on the benchmarking of systems and components used as building blocks of modern information and communication technology applications. It provides theoretical and practical foundations as well as an in-depth exploration of modern benchmarks and benchmark development. The book is divided into two parts: foundations and applications. The first part introduces the foundations of benchmarking as a discipline covering the three fundamental elements of each benchmarking approach: metrics, workloads, and measurement methodology. The second part focuses on different application areas, presenting contributions in specific fields of benchmark development. These contributions address the unique challenges that arise in the conception and development of benchmarks for specific systems or subsystems, and they demonstrate how the foundations and concepts in the first part of the book are being used in existing benchmarks. Further, the book presents a number of concrete applications and case studies based on input from leading benchmark developers from consortia such as the Standard Performance Evaluation Corporation (SPEC) and the Transaction Processing Performance Council (TPC). Besides a number of updates in almost all chapters for this new edition, three chapters are added in Part II of the book: 1. Machine Learning and Artificial Intelligence to cater the growing need to evaluate and benchmark ML and AI systems; 2. Scalability of Networks and Systems focusing on novel metrics and techniques to evaluate scalability; and 3. PC Workstation Graphics and Network Benchmarks covering popular benchmarks like SYSmark, PCMark, Phoronix Test Suite, 3DMark, the Blender benchmark, and end-to-end network performance tools. Providing both practical and theoretical foundations as well as a detailed discussion of modern benchmarks and their development, the book is intended as a handbook for professionals and researchers working in areas related to benchmarking. It offers an up-to-date point of reference for existing work as well as latest results, research challenges, and future research directions. It also can be used as a textbook for graduate and postgraduate students studying any of the many subjects related

to benchmarking While readers are assumed to be familiar with the principles and practices of computer science as well as software and systems engineering no specific expertise in any subfield of these disciplines is required *Innovative Technologies on Electrical Power Systems for Smart Cities Infrastructure* Imad Aboudrar, Farhad Ilahi Bakhsh, Anand Nayyar, Ilias Ouachtouk, 2025-04-17 This book compiles selected papers from the International Conference on Electrical Systems and Smart Technologies ICESST 2024 held in Dakhla Morocco December 11 13 2024 It presents key research insights offering a structured exploration of innovations in electrical systems and smart technologies The first section covers power electronics and electrical systems focusing on advanced control techniques electrical machines and drives It then transitions to computational intelligence and soft computing highlighting the role of machine learning and deep learning in enhancing modern electrical systems Next the book delves into IoT and embedded systems emphasizing their impact on smart infrastructure and smart cities addressing challenges and solutions in efficiency and effectiveness The smart grids and power systems section explores energy management renewable energy integration and forecasting underscoring sustainability in modern power systems This leads to a discussion on sustainable energy solutions covering hydrogen energy fuel cells storage systems and electrical mobility Finally the book examines automation robotics and control technologies showcasing advancements in mechatronics industrial automation and AI driven robotics This comprehensive guide provides valuable insights into current trends challenges and future directions in electrical engineering and smart technologies making it essential for professionals researchers and students **Data Sources**, 2000 **PC Magazine**, 2007 **TP-Link Archer BE600 BE9700 Router User Guide** William E.
