Beyond open access: visions for open evaluation of scientific papers by post-publication peer review Nikolaus Kriegeskorte, Diana Deca, A scientific publication system needs to provide two basic services access and evaluation The traditional publication system restricts the access to papers by requiring payment and it restricts the evaluation of papers by relying on just 2-4 pre publication peer reviews and by keeping the reviews secret As a result the current system suffers from a lack of quality and transparency of the peer review evaluation process and the only immediately available indication of a new paper's quality is the prestige of the journal it appeared in Open access is now widely accepted as desirable and is slowly beginning to become a reality However the second essential element evaluation has received less attention Open evaluation an ongoing post publication process of transparent peer review and rating of papers promises to address the problems of the current system However it is unclear how exactly such a system should be designed The evaluation system steers the attention of the scientific community and thus the very course of science For better or worse the most visible papers determine the direction of each field and guide funding and public policy decisions Evaluation therefore is at the heart of the entire endeavor of science As the number of scientific publications explodes evaluation and selection will only gain importance A grand challenge of our time therefore is to design the future system by which we evaluate papers and decide which ones deserve broad attention So far scientists have left the design of the evaluation process to journals and publishing companies However the steering mechanism of science should be designed by scientists The cognitive computational and brain sciences are best prepared to take on this task which will involve social and psychological considerations software design and modeling of the network of scientific papers and their interrelationships This Research Topic in Frontiers in Computational Neuroscience collects visions for a future system of open evaluation Because critical arguments about the current system abound these papers will focus on constructive ideas and comprehensive designs for open evaluation systems Design decisions include Should the reviews and ratings be entirely transparent or should some aspects be kept secret Should other information such as paper downloads be included in the evaluation How can scientific objectivity be strengthened and political motivations weakened in the future system Should the system include signed and authenticated reviews and ratings Should the evaluation be an ongoing process such that promising papers are more deeply evaluated How can we bring science and statistics to the evaluation process e.g. should rating averages come with error bars How should the evaluative information about each paper e.g. peer ratings be combined to prioritize the literature Should different individuals and organizations be able to define their own evaluation formulae e.g. weighting ratings according to different criteria How can we efficiently transition toward the future system Ideally the future system will derive its authority

from a scientific literature on community based open evaluation We hope that these papers will provide a starting point

Michael Hayden, Alan Dershowitz, Glenn Greenwald, Alexis Ohanian, 2014-11-21 Does government surveillance make us safer The thirteenth Munk Debate held in Toronto on Friday May 2 2014 pitted Michael Hayden and Alan Dershowitz against Glenn Greenwald and Alexis Ohanian to debate whether state surveillance is a legitimate defence of our freedom the democratic issue of the moment In a risk filled world democracies are increasingly turning to large scale state surveillance at home and abroad to fight complex and unconventional threats but is it justified For some the threats more than justify the current surveillance system and the laws and institutions of democracies are more than capable of balancing the needs of individual privacy with collective security But for others we are in peril of sacrificing to a vast and unaccountable state surveillance apparatus the civil liberties that guarantee citizens basic freedoms and our democratic way of life In this edition of the Munk Debates former head of the CIA and NSA Michael Hayden and civil liberties lawyer Alan Dershowitz square off against journalist Glenn Greenwald and reddit co founder Alexis Ohanian to debate the legitimacy of state surveillance With issues of Internet privacy increasingly gaining prominence the Munk Debate on the Surveillance State asks Should government be able to monitor our activities in order to keep us safe *A Complete Collection Of State-Trials And Proceedings For High-Treason And Other Crimes and Misdemeanours* Francis Hargrave, 1781
