Education and Development Walter W. McMahon,2000-01-27 This book develops a new approach to measuring the total returns to human resource development through investment in education Drawing on microanalytic foundations it uses regional and worldwide data to estimate the net marginal contributions of education and new knowledge both to economic growth and to wider effects on democratization human rights political stability health net population growth rates reduction of poverty inequality in income distribution crime drug use and the environment The total impact of

education policy changes on endogenous development is then estimated using an interactive model This new approach is important to industrialized and developing countries alike The diffusion of knowledge and the adaptation of new techniques has been identified as crucial to the growth process in the new endogenous growth models and is of increasing strategic importance in current knowledge based globalizing economies Similarly the non monetary returns from education are important in improving human welfare Measurement of these non market returns is a crucial but much neglected subject It has proved frustrating and existing microanalytic measures have proved piecemeal The new approach developed here offers some comprehensive estimates and simulation techniques for finding more cost effective policies and also suggests new hypotheses for further microanalytic testing
