Threshold Heather Suzanne Woods,2024-05-15 Smart homes are domestic spaces outfitted with networked technology made by brands like Google Facebook Amazon and Apple However Silicon Valley purveyors are not the only important actors in smart home development Appliance makers logistics companies health and wellness conglomerates insurance companies and security franchises are all betting on the smart home in an economy that

puts a premium on data Together major players in the smart home space have successfully attracted the attention and pocketbooks of millions of households by touting the virtues of ambient networked technologies as an upgrade to modern domestic life If industry predictions hold nearly half of American houses will be smart by 2024 Yet what it means to be smart is still unsettled Threshold asks and answers the question How do smart homes communicate cultural values about the role of technology in the 21st century Answering this question is time sensitive as the coming years will determine how smart homes are configured who has access to them and what they mean to their owners policy makers technology companies and others invested in these domestic digital platforms The consequences of these decisions are significant because they impact both smart home residents and society at large At present much of the research on smart homes caters either to industry experts or scientists and engineers This literature often describes or evaluates the technical capacities of the smart home or focuses on user interface and design Instead Heather Woods argues we need a sustained cultural analysis of smart homes that considers the socio technical variables gender class income disparity race criminal justice the housing market and the future of both labor and domesticity that give the smart home meaning Threshold takes up this challenge from a rhetorical perspective arguing that smart homes are lived material embodiments of the digital cultures in which they are imagined built and used Those considerations more often than not are relegated to secondary considerations when in truth they are the most pervasive and consequential factors affecting anyone participating in a smart home ecosystem Woods argues that smart homes are spatial manifestations of a phenomenon called living in digitality a cultural condition whereby users engage with technology at every moment of every day Using extensive fieldwork at smart homes throughout the USA Woods traces how smart homes urge ubiquitous computing as a normalized daily practice readying domestic spaces and their occupants for an increasingly transactional digital future that is largely controlled by corporate interests Threshold advances knowledge in three ways by 1 Offering definitional tools for identifying and evaluating immersive technologies including but not limited to the smart home 2 Identifying three distinct configurations of the smart home according to their domestic and technological functions 3 Demonstrating the productive capacity of smart homes and smart devices to influence social life The book highlights the rhetorical force of smart domesticity for rhetorical scholars digital humanists political scientists critical theorists policy makers and residents or prospective residents of smart homes Ultimately Threshold serves as a toolkit for recognizing and responding to the persistent encroachment of digital technologies in all parts of our lives

Quantitative Logic and Soft Computing Bing-Yuan Cao, Shuli Chen, Guojun Wang, Sicong Guo, 2010-10-14 Admittedly the notion intelligence or intelligent computing has been around us for several decades implicitly indicating any non conventional methods of solving complex system problems such as expert systems and intelligent control techniques that mimic human skill and replace human operators for automation Various kinds of intelligent methods have been suggested phenomenological or ontological and we have been witnessing quite successful applications On the other hand Soft

Computing Techniques is the concept coined by Lot Zadeh referring to a set of approaches of computing which parallels the remarkable ability of the human mind to reason and learn in an environment of uncertainty imprecision and partial truth. Such a notion is well contrasted with the conventional binary logic based hard computing and has been effectively utilized with the guiding principle of exploiting the tolerance for uncertainty imprecision and partial truth to achieve tractability business and low solution cost. The soft computing techniques are often employed as the technical entities in a tool box with tools being FL ANN Rough Set GA etc. Based on one's intuition and experience an engineer can build and realize human like systems by smartly mixing proper technical tools effectively and efficiently in a wide range of fields. For some time the soft computing techniques are also referred to as intelligent computing tools.

Microcontroller and Smart Home Networks Dawoud Shenouda Dawoud, Peter Dawoud, 2022-09-01. Over recent years industries have faced the problem of how to connect devices to speak to each other with minimum wiring. Philips Semiconductors faced this problem when they needed to connect many ICs together. The Automotive Industry faced the same problem when it needed to connect tens of microcontrollers in each car. Recently with smart homes the problem has started to be part of each home. For instance you may want to build your smart home with accessories from different manufacturers and you want the devices to speak to each other. Added to that you may want to control them from a central App or voice assist. Solutions for this problem started with the introduction of Inter Integrated Circuits IIC and Controller Area Networks CAN. Both solutions are wired networks that allow ICs and microcontrollers to be connected in a network to communicate together. In smart home automation a number of common smart home automation protocols that allow different devices to speak and communicate together have appeared during the last few decades. Some of the smart home protocols come under the umbrella of what is called the Internet of Things IoT. The proposed protocols can be grouped into wired networks e.g. X10 UPB wireless or radio networks as ZigBee Z Wave Bluetooth or dual wired and radio such as Insteon. This book introduces to the reader some of the most popular Microcontroller and Smart home networks. The book covers in detail the following protocols I2C I3C CAN ZigBee ZigBee Pro Z Wave Bluetooth Wi Fi WiMax and Insteon are part of our companion book Serial Communication Protocols and Standards. This book gives detailed comparisons between the various protocols. To complete the knowledge of the reader the book gives in the last chapter a short summary on the protocols that we did not fully cover in this volume Ethernet Thread Insteon X10 and UPB.

The Connected Home: The Future of Domestic Life Richard Harper, 2012-01-11. The title of this new book The Connected Home reflects the move away from the idea that smart homes would alter the lives of those living in them by providing technologies to take over tasks that were previously the responsibility of the householder such as managing entertainment education and even eating. Up until around 10 years ago this view was commonplace but time has shown that the technologies to support a smart home have not developed in such a way as to support this premise. Instead what people do in their homes has moved the concept of a smart home into that of the connected home. The rise of on line games

technologies video connections via Skype social networking internet browsing etc are now an integral part of the home environment and have had a significant effect on the home The contributors to this exciting new book consider and discuss the effects and ramifications of the connected home from a variety of viewpoints an examination of the take up of personal computers and the Internet in domestic situations an analysis of the changing intersection of technology and human habits in the connected home the impact of gaming texting e book readers tablets and other devices and their effect on the social conditions of a household the relationship between digital messaging applications and real geography and an overview of how sensing technologies for the smart home might evolve lightweight medical technologies for example The book culminates by addressing unfinished ambitions from the smart home agenda the factors that have prevented their realisation and addresses the need for extending research into the area Operation of Smart Homes Mehdi

Rahmani-Andebili,2021-06-15 This book presents the latest research advancements in the operation of smart homes It comprises new operation techniques including cooperative distributed energy scheduling framework to react to malicious cyberattacks framework for demand side management and framework for the design of smart homes to support residents wellness as well as new optimization techniques such as stochastic model predictive control and multi time scale optimization In addition the book analyzes 11 000 studies that have been indexed in scientific databases and categorizes them based on various data points including the field and the subject of the research the name of the institutions and the nationality of the authors Presents new operation techniques of smart homes Introduces new optimization techniques for operation of smart homes Analyses 11 000 studies and categorizes them based on different data points **Smart Homes and Their Users**

Tom Hargreaves,Charlie Wilson,2017-09-25 Smart home technologies promise to transform domestic comfort convenience security and leisure while also reducing energy use But delivering on these potentially conflicting promises depends on how they are adopted and used in homes This book starts by developing a new analytical framework for understanding smart homes and their users Drawing on a range of new empirical research combining both qualitative and quantitative data the book then explores how smart home technologies are perceived by potential users how they can be used to link domestic energy use to common daily activities how they may or may not be integrated into everyday life by actual users and how they serve to change the nature of control within households and the home The book concludes by synthesising a range of evidence based insights and posing a series of challenges for industry policy and research that need addressing if a smart home future is to be realised Researchers will find this book provides useful insights into this fast growing field

Distributed Computing and Monitoring Technologies for Older Patients Juris Klonovs,Mohammad Ahsanul Haque,Volker Krüger,Kamal Nasrollahi,Karen Andersen-Ranberg,Thomas B. Moeslund,Erika Geraldina Spaich,2016-01-21 This book summarizes various approaches for the automatic detection of health threats to older patients at home living alone The text begins by briefly describing those who would most benefit from healthcare supervision The book then summarizes possible

scenarios for monitoring an older patient at home deriving the common functional requirements for monitoring technology. Next, the work identifies the state of the art of technological monitoring approaches that are practically applicable to geriatric patients. A survey is presented on a range of such interdisciplinary fields as smart homes, telemonitoring, ambient intelligence, ambient assisted living, gerontechnology, and aging in place technology. The book discusses relevant experimental studies highlighting the application of sensor fusion, signal processing, and machine learning techniques. Finally, the text discusses future challenges, offering a number of suggestions for further research directions.

Smart Home Hacks Gordon Meyer, 2004-10-25 So much of what is commonplace today was once considered impossible or at least wishful thinking. Laser beams in the operating room, cars with built-in guidance systems, cell phones with email access. There's just no getting around the fact that technology always has and always will be very cool. But technology isn't only cool; it's also very smart. That's why one of the hottest technological trends nowadays is the creation of smart homes. At an increasing rate, people are turning their homes into state-of-the-art machines complete with more switches, sensors, and actuators than you can shake a stick at. Whether you want to equip your home with motion detectors for added security, install computer-controlled lights for optimum convenience, or even mount an in-home web cam or two purely for entertainment, the world is now your oyster. Ah, but like anything highly technical, creating a smart home is typically easier said than done. Thankfully, *Smart Home Hacks* takes the guesswork out of the process. Through a seemingly unending array of valuable tips, tools, and techniques, *Smart Home Hacks* explains in clear detail how to use Mac, Windows, or Linux to achieve the automated home of your dreams. In no time, you'll learn how to turn a loose collection of sensors and switches into a well-automated and well-functioning home, no matter what your technical level may be. *Smart Home Hacks* covers a litany of stand-

alone and integrated smart home solutions designed to enhance safety comfort and convenience in new and existing homes Kitchens bedrooms home offices living rooms and even bathrooms are all candidates for smart automation and therefore are all addressed in Smart Home Hacks intelligently written by engineering guru and George Jetson wannabe Gordon Meyer Smart Home Hacks leaves no stone unturned From what to purchase to how to use your remote control it s the ultimate guide to understanding and implementing complete or partial home automation

Creative Technologies for Multidisciplinary Applications Connor, Andy M., 2016-03-29

Given that institutions of higher education have a predisposition to compartmentalize and delineate areas of study creative technology may seem oxymoronic On the contrary the very basis of western thought is found in the idea of transcendent knowledge The marriage of opposing disciplines therefore acts as a more holistic approach to education Creative Technologies for Multidisciplinary Applications acts as an inspiration to educators and researchers who wish to participate in the future of such multidisciplinary disciplines Because creative technology encompasses many applications with the realm of art gaming the humanities and digitization this book features a diverse collection of relevant research for the modern world It is a pivotal reference publication for educators students and researchers in fields related to sociology technology and the humanities **Information in Contemporary Society** Natalie Greene Taylor,Caitlin Christian-Lamb,Michelle H.
