of excessive food intake lack of physical activity and genetic susceptibility A few cases are caused primarily by genes endocrine disorders medications or mental illness Evidence to support the view that obese people eat little yet gain weight due to a slow metabolism is not generally supported On average obese people have a greater energy expenditure than their thin counterparts due to the energy required to maintain an increased body mass Obesity is mostly preventable through a combination of social changes and personal choices Changes to diet and exercising are the main treatments Diet plays an important role in the genesis of obesity Personal choices advertising social customs and cultural influences as well as food availability and pricing all play a role in determining what and how much an individual eats This book has been written not in

the usual format of cause effect treatment When we are in the house we get to eat only what is in the kitchen but when we go to a cafeteria we can get whatever we want and of there is also the advantage of self service
