show that a lot of problems are solved by the usage of computer technology for helping handicapped persons for instance for
the blind and visually handicapped A consequence of the discussed themes there are two directions which should be done in
the next years One direction is obvious The tools must be improved and research and development work should be extended
to all groups of handicapped even if they are numerically not so large as for instance the blind or visually handicapped persons
On the other side in the area of social implications there is an increasing demand on social science studies on overall computer
use among disabled persons Because sources are in principle missing today about disabled persons work tasks research in
this field must begin by trying to survey this aspect Particular attention should be paid to the extent and character of
computer use among the handicapped in work life There are a lot of questions which should be answered during the next
years for reaching the aim of rehabilitation Fifteen years later the 9th International Conference on Computers Helping
People with Special Needs Paris 2004 offered a comprehensive and deepened view on general awareness special research and
