Schwarzkopf, Martin Sommerfeld, Yutaka Tsuji, 2011-08-26 Since the publication of the first edition of Multiphase Flow with Droplets and Particles there have been significant advances in science and engineering applications of multiphase fluid flow Maintaining the pedagogical approach that made the first edition so popular this second edition provides a background in this important area of fluid mechanics to those new to the field and a resource to those actively involved in the design and development of multiphase systems See what's new in the Second Edition Chapter on the latest developments in carrier phase turbulence Extended chapter on numerical modeling that includes new formulations for turbulence and Reynolds stress models Review of the fundamental equations and the validity of the traditional two fluid approach Expanded exercises and a solutions manual A quick look at the table of contents supplies a snapshot of the breadth and depth of coverage found in this completely revised and updated text Suitable for a first year graduate 5th year course as well as a reference for engineers and scientists the book is clearly written and provides an essential presentation of key topics in the study of gas particle and gas droplet flows

Fluid Mechanics of Environmental Interfaces, Second Edition Carlo Gualtieri, Dragutin T. Mihailovic, 2012-11-21 Environmental Fluid Mechanics EFM studies the motion of air and water at several different scales the fate and transport of species carried along by these fluids and the interactions among those flows and geological biological and engineered systems EFM emerged some decades ago as a response to the need for tools to study problems of flow and transport in rivers estuaries lakes groundwater and the atmosphere it is a topic of increasing importance for decision makers engineers and researchers alike The second edition of the successful textbook Fluid Mechanics of Environmental Interfaces is still aimed at providing a comprehensive overview of fluid mechanical processes occurring at the different interfaces existing in the realm of EFM such as the air water interface the air land interface the water sediment interface the surface water groundwater interface the water vegetation interface and the water biological systems interface Across any of these interfaces mass momentum and heat are exchanged through different fluid mechanical processes over various spatial and temporal scales In this second edition the unique feature of this book considering all the topics from the point of view of the concept of environmental interface was maintained while the chapters were updated and five new chapters have been added to significantly enlarge the coverage of the subject area The book starts with a chapter introducing the concept of EFM and its scope scales processes and systems Then the book is structured in three parts with fifteen chapters Part one which is composed of four chapters covers the processes occurring at the interfaces between the atmosphere and the surface of the land and the seas including the transport of dust and the dispersion of passive substances within the atmosphere Part two deals in five chapters with the fluid mechanics at the air water interface at small scales and sediment water interface including the advective diffusion of air bubbles the hyporheic exchange and the tidal bores Finally

part three discusses in six chapters the processes at the interfaces between fluids and biotic systems such as transport processes in the soil vegetation lower atmosphere system turbulence and wind above and within the forest canopy flow and mass transport in vegetated open channels transport processes to and from benthic plants and animals and coupling between interacting environmental interfaces Each chapter has an educational part which is structured in four sections a synopsis of the chapter a list of keywords that the reader should have encountered in the chapter a list of questions and a list of unsolved problems related to the topics covered by the chapter The book will be of interest to graduate students and researchers in environmental sciences civil engineering and environmental engineering geo physics atmospheric science meteorology limnology oceanography and applied mathematics
