Tierney University of Southern California and the late J Douglas Toma University of Georgia *Hard to Be Human* Ted Cadsby,2021-10-12 Powerful strategies to combat the design flaws of the human brain that make life in the twenty first century unreasonably difficult If other animals could study us the way we study them they would be puzzled by our unique ability to inflict misery on ourselves We expend a lot of energy replaying past anguish anticipating future distress and stewing in self righteous anger Other animals would call us out for being oddly paradoxical creatures who long to be happy but who are the source of their own suffering We worry about things we have no control over We complain about not being understood while casting a critical eye on others We stubbornly defend our beliefs despite contradictory evidence Complicating all of this is our struggle to adapt to a complex world that we created who struggle to adapt to a confusing world that we ourselves created In our defence we haven t yet mastered our neuron packed brains whose incredible complexity evolved over millennia in a very different world than today s The result of this evolutionary journey Five design

features that often morph into design flaws in need of fixing *Hard to Be Human* corrals the best insights from psychology neuroscience physics and philosophy to reveal powerful strategies for the five big battles we each face in the war with our misguided misbehaving selves Tapping into deeply personal stories to ground the concepts in real life Cadsby reveals how we can overcome our design flaws to be smarter happier and better adapted to the complexities of life in the twenty first century
