Multispectral Image Analysis Using The Object Oriented Paradigm Remote Sensing Applications Series:

Multispectral Image Analysis Using the Object-Oriented Paradigm Kumar Navulur, 2006-12-05 Bringing a fresh new perspective to remote sensing object based image analysis is a paradigm shift from the traditional pixel based approach. Featuring various practical examples to provide understanding of this new modus operandi Multispectral Image Analysis Using the Object Oriented Paradigm reviews the current image analysis methods and demonstrates advantages to improve information extraction from imagery. This reference describes traditional image analysis techniques, introduces object oriented technology, and discusses the benefits of object based versus pixel based classification. It examines the creation of object primitives using image segmentation approaches and the use of various techniques for object classification. The author covers image enhancement methods, how to use ancillary data to constrain image segmentation, and concepts of semantic grouping of objects. He concludes by addressing accuracy assessment approaches. The accompanying downloadable resources present sample data that enable the use of different approaches to problem solving. Integrating remote sensing techniques and GIS analysis, Multispectral Image Analysis Using the Object Oriented Paradigm distills new tools to extract information from remotely sensed data.

The Proceedings of the Coastal Sediments 2011 Ping Wang, 2011 This proceedings contains nearly 200 papers on cutting edge research presented at the seventh international Symposium on Coastal Engineering and Science of Coastal Sediment Processes held May 20-26, 2011 in Miami, Florida, USA. This technical specialty conference was devoted to promoting an interdisciplinary exchange of state of the art knowledge among researchers in the fields of coastal engineering, geology, oceanography, and related disciplines with a theme of bringing together theory and practice. Focusing on the physical aspects of sediment processes in various coastal environments, this three volume conference proceedings provides findings from the latest research and newest engineering applications. Session topics cover a wide range including barrier island morphodynamics and evolution, beach nourishment and shore protection, coastal dunes, cohesive sediment transport, field and laboratory measurements of sediment transport processes, and numerical modeling of gravel transport. Large scale and long term coastal changes, LiDAR and remote sensing, longshore and cross shore sediment transport, marsh and wetlands, regional sediment management, river deltas, sea level changes, shelf and sand bodies, shoreline changes, tidal inlets, and navigation channels. A special session on recent research findings at the Northern Gulf of Mexico is also included.
