Donald Farr,2024 Ford Mustang 60 Years celebrates six decades of the original pony car in this beautifully illustrated officially licensed book Machines of Youth Gary S. Cross,2018-05-04 For American teenagers getting a driver s license has long been a watershed moment separating teens from their childish pasts as they accelerate toward the sweet sweet freedom of their futures With driver s license in hand teens are on the road to buying and driving and maybe even crashing their first car a machine which is home to many a teenage ritual being picked up for a first date parking at a scenic overlook or blasting the radio with a gaggle of friends in tow So important is this car ride into adulthood that automobile culture has become a stand in a shortcut to what millions of Americans remember about their coming of age Machines of Youth traces the rise and more recently the fall of car culture among American teens In this book Gary S Cross details how an automobile obsession drove teen peer culture from the 1920s to the 1980s seducing budding adults with privacy freedom mobility and spontaneity Cross shows how the automobile redefined relationships between parents and teenage children becoming a rite of passage producing new courtship rituals and fueling the growth of numerous car subcultures Yet for teenagers today the lure of the automobile as a transition to adulthood is in decline Tinkerers are now sidelined by the advent of digital engine technology and premolded body construction while the attention of teenagers has been captured by iPhones video games and other digital technology And adults have become less tolerant of teens on the road restricting both cruising and access to drivers licenses Cars are certainly not going out of style Cross acknowledges but how upcoming generations use them may be changing He finds that while vibrant enthusiasm for them lives on cars may no longer be at the center of how American youth define themselves But for generations of Americans the modern teen experience was inextricably linked to this particularly American icon Emergency and Clinical Ultrasound Board Review Alan Chiem,Vi Am Dinh,2020 Emergency

Biomaterials and Bioactive Molecules to Drive Differentiation in Striated Muscle Tissue Engineering Valentina Di Felice, Giancarlo Forte, Dario Coletti, 2016-05-18 Tissue engineering is an

innovative multidisciplinary approach which combines bio materials cells and growth factors with the aim to obtain neo organogenesis to repair or replenish damaged tissues and organs The generation of engineered tissues and organs e g skin and bladder has entered into the clinical practice in response to the chronic lack of organ donors In particular for the skeletal and cardiac muscles the translational potential of tissue engineering approaches has clearly been shown even though the construction of this tissue lags behind others given the hierarchical highly organized architecture of striated muscles Cardiovascular disease is the leading cause of death in the developed world where the yearly incidence of Acute MI AMI is approx 2 million cases in Europe Recovery from AMI and reperfusion is still less than ideal Stem cell therapy may represent a valid treatment However delivery of stem cells alone to infarcted myocardium provides no structural support while the myocardium heals and the injected stem cells do not properly integrate into the myocardium because they are not subjected to the mechanical forces that are known to drive myocardial cellular physiology On the other hand there are many clinical cases where the loss of skeletal muscle due to a traumatic injury an aggressive tumour or prolonged denervation may be cured by the regeneration of this tissue In vivo stem or progenitor cells are sheltered in a specialized microenvironment niche which regulates their survival proliferation and differentiation The goal of this research topic is to highlight the available knowledge on biomaterials and bioactive molecules or a combination of them which can be used successfully to differentiate stem or progenitor cells into beating cardiomyocytes or organized skeletal muscle in vivo Innovations compared to the on going trials may be 1 the successful delivery of stem cells using sutural scaffolds instead of intracoronary or intramuscular injections 2 protocols to use a limited number of autologous or allogeneic stem cells 3 methods to drive their differentiation by modifying the chemical physical properties of scaffolds or biomaterials incorporating small molecules i e miRNA or growth factors 4 methods to tailor the scaffolds to the elastic properties of the muscle 5 studies which suggest how to realize scaffolds that optimize tissue functional integration through the combination of the most up to date manufacturing technologies and use of bio polymers with customized degradation properties
