Music And Connectionism:

Music and Connectionism Peter M. Todd, D. Gareth Loy, 1991 Annotation As one of our highest expressions of thought and creativity music has always been a difficult realm to capture model and understand The connectionist paradigm now beginning to provide insights into many realms of human behavior offers a new and unified viewpoint from which to investigate the subtleties of musical experience Music and Connectionism provides a fresh approach to both fields using the techniques of connectionism and parallel distributed processing to look at a wide range of topics in music research from pitch perception to chord fingering to composition The contributors leading researchers in both music psychology and neural networks address the challenges and opportunities of musical applications of network models The result is a current and thorough survey of the field that advances understanding of musical phenomena encompassing perception cognition composition and performance and in methods for network design and analysis Peter M Todd is a doctoral candidate in the PDP Research Group of the Psychology Department at Stanford University Gareth Loy is an award winning composer a lecturer in the Music Department of the University of California San Diego and a member of the technical staff of Frox Inc Contributors Jamshed J Bharucha Peter Desain Mark Dolson Robert Gjerclingen Henkjan Honing B Keith Jenkins Jacqueline Jons Douglas H Keefe Tuevo Kohonen Bernice Laden Pauli Laine Otto Laske Marc Leman J P Lewis Christoph Lischka D Gareth Loy Ben Miller Michael Mozer Samir I Sayegh Hajime Sano Todd Soukup Don Scarborough Kalev Tiits Peter M Todd Kari Torkkola *Readings in Music and Artificial Intelligence* Eduardo Reck Miranda, 2013-10-28 The interplay between emotional and intellectual elements feature heavily in the research of a variety of scientific fields including neuroscience the cognitive sciences and artificial intelligence AI This collection of key introductory texts by top researchers worldwide is the first study which introduces the subject of artificial intelligence and music to beginners Eduardo Reck Miranda received a Ph D in music and artificial intelligence from the University of Edinburgh Scotland He has published several research papers in major international journals and his compositions have been performed worldwide Also includes 57 musical examples

Language and Music as Cognitive Systems Patrick Rebuschat, 2012 The past 15 years have witnessed an increasing interest in the comparative study of language and music as cognitive systems This book presents an interdisciplinary study of language and music exploring the following core areas structural comparisons evolution learning and processing and neuroscience *The ^AOxford Handbook of Critical Concepts in Music Theory* Alexander Rehding, Steven Rings, 2019-11-19 Music Theory operates with a number of fundamental terms that are rarely explored in detail This book offers in depth reflections on key concepts from a range of philosophical and critical approaches that reflect the diversity of the contemporary music theory landscape **The Cambridge History of Western Music Theory** Thomas Christensen, 2006-04-20 The Cambridge History of Western Music Theory is the first comprehensive history of Western music theory to be published in the English language A collaborative project by leading music theorists and historians the volume

traces the rich panorama of music theoretical thought from the Ancient Greeks to the present day Recognizing the variety and complexity of music theory as an historical subject the volume has been organized within a flexible framework Some chapters are defined chronologically within a restricted historical domain whilst others are defined conceptually and span longer historical periods Together the thirty one chapters present a synthetic overview of the fascinating and complex subject that is historical music theory Richly enhanced with illustrations graphics examples and cross citations as well as being thoroughly indexed and supplemented by comprehensive bibliographies of the most important primary and secondary literature this book will be an invaluable resource for students and scholars alike

An Open Design for Computer-Aided Algorithmic Music Composition Christopher Ariza,2005 This dissertation introduces a new design for a computer aided algorithmic music composition system Rather than exploring specific algorithms this study focuses on system and component design The design introduced here is demonstrated through its implementation in athenaCL a modular polyphonic poly paradigm algorithmic music composition system in a cross platform interactive command line environment The athenaCL system offers an open source object oriented composition tool written in Python The system can be scripted and embedded and includes integrated instrument libraries post tonal and microtonal pitch modeling tools multiple format graphical outputs and musical output in Csound MIDI audio file XML and text formats Software design analysis is framed within a broad historical and intertextual study of the themes approaches and systems of computer aided algorithmic composition CAAC A detailed history of the earliest experiments as well as analysis of the foundational CAAC systems is provided Common problems and interpretations of CAAC are then presented in a historical and intertextual context drawn from the writings and systems of numerous composers and developers Toward the goal of developing techniques of comparative software analysis a survey of system design archetypes based on seven descriptors of CAAC systems is presented With this foundation athenaCL system components are analyzed in detail System components are divided into abstractions of musical materials abstractions of musical procedures and system architecture For each component object models Python examples and diagrams are provided Further each component is given context in terms of its compositional implications and relation to alternative and related models from the history of CAAC

Proceedings of the Fifteenth Annual Conference of the Cognitive Science Society Science Society Cognitive, Con,POLSON,1993 This volume features the complete text of all regular papers posters and summaries of symposia presented at the 15th annual meeting of the Cognitive Science Society Mind, Body, World Michael R. W. Dawson,2013 Cognitive science arose in the 1950s when it became apparent that a number of disciplines including psychology computer science linguistics and philosophy were fragmenting Perhaps owing to the field s immediate origins in cybernetics as well as to the foundational assumption that cognition is information processing cognitive science initially seemed more unified than psychology However as a result of differing interpretations of the foundational assumption and dramatically divergent views of the meaning of the term information processing three separate schools emerged classical cognitive science connectionist cognitive science and embodied cognitive science Examples cases and research findings taken from the wide range of phenomena studied by cognitive scientists effectively explain and explore the relationship among the three perspectives Intended to introduce both graduate and senior undergraduate students to the foundations of cognitive science Mind Body World addresses a number of questions currently being asked by those practicing in the field What are the core assumptions of the three different schools What are the relationships between these different sets of core assumptions Is there only one cognitive science or are there many different cognitive sciences Giving the schools equal treatment and displaying a broad and deep understanding of the field Dawson highlights the fundamental tensions and lines of fragmentation that exist among the schools and provides a refreshing and unifying framework for students of cognitive science **Embodied Music Cognition and Mediation Technology** Marc Leman,2007-08-03 A proposal that an embodied cognition approach to music research drawing on work in computer science psychology brain science and musicology offers a promising framework for thinking about music mediation technology Digital media handles music as encoded physical energy but humans consider music in terms of beliefs intentions interpretations experiences evaluations and significations In this book drawing on work in computer science psychology brain science and musicology Marc Leman proposes an embodied cognition approach to music research that will help bridge this gap Assuming that the body plays a central role in all musical activities and basing his approach on a hypothesis about the relationship between musical experience mind and sound energy matter Leman argues that the human body is a biologically designed mediator that transfers physical energy to a mental level engaging experiences values and intentions and reversing the process transfers mental representation into material form He suggests

that this idea of the body as mediator offers a promising framework for thinking about music mediation technology Leman proposes that under certain conditions the natural mediator the body can be extended with artificial technology based mediators He explores the necessary conditions and analyzes ways in which they can be studied Leman outlines his theory of embodied music cognition introducing a model that describes the relationship between a human subject and its environment analyzing the coupling of action and perception and exploring different degrees of the body's engagement with music He then examines possible applications in two core areas interaction with music instruments and music search and retrieval in a database or digital library The embodied music cognition approach Leman argues can help us develop tools that integrate artistic expression and contemporary technology

W. Dawson,2018-03-13 Previously artificial neural networks have been used to capture only the informal properties of music However cognitive scientist Michael Dawson found that by training artificial neural networks to make basic judgments concerning tonal music such as identifying the tonic of a scale or the quality of a musical chord the networks revealed formal musical properties that differ dramatically from those typically presented in music theory For example where Western music theory identifies twelve distinct notes or pitch classes trained artificial neural networks treat notes as if they belong to only three or four pitch classes a wildly different interpretation of the components of tonal music Intended to introduce readers to the use of artificial neural networks in the study of music this volume contains numerous case studies and research findings that address problems related to identifying scales keys classifying musical chords and learning jazz chord progressions A detailed analysis of the internal structure of trained networks could yield important contributions to the field of music cognition **Prospects for Artificial Intelligence** Aaron Sloman,David Hogg,Glyn W. Humphreys,A. Ramsay,Derek Partridge,1993-02-28 Dealing with the theme of prospects for artificial intelligence as the general science of intelligence this work covers a wide range of topics It attempts to identify trends and projects into the future instead of simply surveying past achievements *Perception And Cognition Of Music* Irene Deliege,John A. Sloboda,2004-08-02 This text comprises of reviews of work relating to music and mind It presents a range of approaches from the psychological through the computational to the musicological The reviews were selected from

papers submitted at the Third International Conference on Music Perception and Cognition Liege 1994 to illustrate the wide range of perspectives now being adopted in studying how humans make and respond to music The book is divided into five sections The first part illustrates the role of analysis and ethnomusicology in understanding cultural determinants of musical behaviour The second part charts what is known about acquisition of musical competence from pre birth through to the expert performer The evidence accumulated about specific areas of the brain which control musical thinking and behaviour is examined in Part Three The fourth part examines how neurological behavioural and artificial intelligence approaches are converging to shed light on processes in auditory perception Finally Part Five highlights the important developments in how we conceptualize the way in which musical structures are represented in the mind
