The Animal Experimentation Debate David E. Newton, 2013-05-09 Reviewing the topic from antiquity to the present day this book examines the debate over the use of animals in research in a fair and balanced way The debate over the use of nonhuman animals in experimental research has gone on for centuries and it continues as vigorously today as it ever has In fact in the last decade the controversy has intensified making animal testing a topic at the highest level of debate of any socioscientific issue in the United States This book presents all sides of the issue so that readers can come to their own conclusions as to the morality and validity of animal experimentation and provides biographies of individuals and descriptions of organizations that have been involved in the debate over the centuries Additionally it documents the historical shift in thinking that made animal experimentation commonplace between the time of the ancient Greeks and the 19th century to the mindset of some who argue for an end to the practice and alternative ways of conducting medical experimentation to benefit human health

Exploring Mathematics Through

Literature Diane Thiessen, 2004 This collection of articles and lessons provides classroom examples of how to use children's literature to teach mathematics effectively in prekindergarten through eighth grade. The articles focus on five content strands: number and operations, algebra, geometry, measurement and data analysis, and probability, and describe how the different authors have used specific books to help their students learn mathematics. Most of the articles involve communication, problem solving, representation, and reasoning, and some of them address connections. Helpful teacher notes indicate the grade range, topic, literature selection featured in the lesson materials, needed discussion of the mathematics, and questions for students. Blackline masters of recording sheets are also included for most lessons. **Friends' Weekly Intelligencer**
