Multistage Separation Processes Solutions Manual:

Predicting the Performance of Multistage Separation Processes Fouad M. Khoury, 2004-11-11 Chemical engineer Khoury explains the performance prediction of multistage separation processes for interactions between vapor and liquids. These processes are at the heart of the petroleum, petrochemical and chemical industries. Although mathematical models are presented in some detail, special attention is paid to the practical interpretation of the models. Industrial heuristics about what ranges of operating variables will work are also included. Annotation copyrighted by Book News Inc. Portland, OR.

Distillation and Absorption '97 Richard Darton, 1997. This volume presents reports from the 1997 conference held in Maastricht, Netherlands. The papers covering a broad range of topics from the estimation of physical properties to the design and performance of contacting trays demonstrate the high rate of advance in technology.

Handbook of Food Process Design, 2 Volume Set Jasim Ahmed, Mohammad Shafiur Rahman, 2012-05-21. In the 21st Century, processing food is no longer a simple or straightforward matter. Ongoing advances in manufacturing have placed new demands on the design and methodology of food processes. A highly interdisciplinary science, food process design draws upon the principles of chemical and mechanical engineering, microbiology, chemistry, nutrition, and economics and is of central importance to the food industry. Process design is the core of food engineering and is concerned at its root with taking new concepts in food design and developing them through production and eventual consumption. **Handbook of Food Process Design** is a major new 2 volume work aimed at food engineers and the wider food industry. Comprising 46 original chapters written by a host of leading international food scientists, engineers, academics, and systems specialists, the book has been developed to be the most comprehensive guide to food process design ever published. Starting from first principles, the book provides a complete account of food process designs including heating and cooling, pasteurization, sterilization, refrigeration, drying, crystallization, extrusion, and separation. Mechanical operations including mixing, agitation, size reduction, extraction, and leaching processes are fully documented. Novel process designs such as irradiation, high pressure processing, ultrasound, ohmic heating, and pulsed UV light are also presented. Food packaging processes are considered, and chapters on food quality, safety, and commercial imperatives portray the role of process design in the broader context of food production and consumption.
