Use of Timber in Tall Multi-Storey Buildings Ian Smith, Andrea Frangi, 2014-01-01 Since the dawn of civilization, timber has been a primary material for achieving great structural engineering feats. Yet during the late 19th century and most of the 20th century, it lost currency as a preferred material for construction of large and tall multi-storey building superstructures. This Structural Engineering Document (SED) addresses a reawakening of interest in timber and timber-based products as primary construction materials for relatively tall multi-storey buildings. Emphasis throughout is on holistically addressing various aspects of performance of complete systems, reflecting that major gaps in knowhow relate to design concepts rather than technical information about timber as a material. Special consideration is given to structural form, fire vulnerability, and durability aspects for attaining desired building performance over lifespans that can be centuries long.

Energy Conservation in the Design of Multi-Storey Buildings Henry J. Cowan, 2013-10-22 Energy Conservation in the Design of Multi-Storey Buildings documents the papers presented at an International Symposium held at The University of Sydney, 1-3 June 1983, sponsored by The University of Sydney, the International Association for Bridge and Structural Engineering, the Council for Tall Buildings and Urban Habitat, and the Institution of Engineers Australia. The volume contains 13 papers organized into two parts. Part I deals with predictive methods. It includes papers that describe the design of Australian projects where energy was a major issue, examine energy conservative building design from the standpoints of New York and Singapore, present a design tool for estimating energy consumption and costs, and consider limitations in the application of computers to the design of the airconditioning plant. Part II is devoted to energy management. The papers survey energy management in Australian office buildings and hospitals, describe energy audits in the United States, and discuss methods for the computer control of energy systems.

Constructing a Place of Critical Architecture in China Guanghui Ding, 2016-03-09 For the past 30 years, The Chinese journal *Time Architecture* (Shidai Jianzhu) has focused on publishing innovative and exploratory work by emerging architects based in private design firms who were committed to new material, theoretical, and pedagogical practices. In doing so, this book argues that the journal has engaged in the presentation and production of a particular form of critical architecture, described as an intermediate criticality, as a response to the particular constraints of the Chinese cultural and political context. The journal's publications displayed a dual critique: a resistant attitude to the dominant modes of commercial building practice characterised by rapid and large-scale urban expansion, and an alternative publishing practice focusing on emerging independent architectural practitioners through the active integration of theoretical debates, architectural projects, and criticisms. This dual critique is illustrated through a

careful review and analysis of the history and programme of the journal By showing how the work of emerging architects including Yung Ho Chang Wang Shu Liu Jiakun and Urbanus are situated within the context of the journal's special thematic editions on experimental architecture exhibition group design new urban space and professional system the book assesses the contribution the journal has made to the emergence of a critical architecture in China in the context of how it was articulated debated presented and perhaps even produced within the pages of the publication itself The protagonists of critical architecture have endeavoured to construct an alternative mode of form and space with strong aesthetic and socio-political implications to the predominant production of architecture under the current Chinese socialist market economy To rebel against certain forms of domination and suppression by capital and power is by no means to completely reject them rather it is to use them

The Modular Housing Handbook Simon Bayliss, Rory Bergin, 2020-08-31 Modular construction has the potential to improve housing quality speed up delivery and reduce building costs so why isn't everyone doing it This practical handbook combines real world advice on designing modular housing with a compelling argument for off site construction as a means for architects taking a greater role and achieving more influence in their housing projects Focusing on the benefits as well as the challenges of modular construction this book illustrates that off site construction need not act as a design constraint and can in fact provide an opportunity for greater design impact Richly illustrated with recent case studies and featuring over 100 photographs of exemplar projects The Modular Housing Handbook provides inspiration as well as timely practical advice
