Multivariate General Linear Models Richard F. Haase, 2011-11-23 Multivariate General Linear Models is an integrated introduction to multivariate multiple regression analysis MMR and multivariate analysis of variance MANOVA Beginning with an overview of the univariate general linear model this volume defines the key steps in analyzing linear model data and introduces multivariate linear model analysis as a generalization of the univariate model The author focuses on multivariate measures of association for four common multivariate test statistics presents a flexible method for testing hypotheses on models and emphasizes the multivariate procedures attributable to Wilks Pillai Hotelling and Roy The volume concludes with a discussion of canonical correlation analysis that is shown to subsume all the multivariate procedures discussed in previous chapters The analyses are illustrated throughout the text with three running examples drawing from several disciplines including personnel psychology anthropology environmental epidemiology and neuropsychology

Multidimensional Item Response Theory Wes Bonifay, 2019-12-10 Several decades of psychometric research have led to the development of sophisticated models for multidimensional test data and in recent years multidimensional item response theory MIRT has become a burgeoning topic in psychological and educational measurement Considered a cutting edge statistical technique the methodology underlying MIRT can be complex and therefore doesn't receive much attention in introductory IRT courses However author Wes Bonifay shows how MIRT can be understood and applied by anyone with a firm grounding in unidimensional IRT modeling His volume includes practical examples and illustrations along with numerous figures and diagrams Multidimensional Item Response Theory includes snippets of R code interspersed throughout the text with the complete R code included on an accompanying website to guide readers in exploring MIRT models estimating the model parameters generating plots and implementing the various procedures and applications discussed throughout the book

Propensity Score Methods and Applications Haiyan Bai, M. H. Clark, 2018-11-20 A concise introductory text Propensity Score Methods and Applications describes propensity score methods PSM and how they are used to balance the distributions of observed covariates between treatment conditions as a means to reduce selection bias This new QASS title specifically focuses on the procedures of implementing PSM for research in social sciences instead of merely demonstrating the effectiveness of the method Using succinct and approachable language to introduce the basic concepts of PSM authors Haiyan Bai and M H Clark present basic concepts assumptions procedures available software packages and step by step examples for implementing PSM using real world data with exercises at the end of each chapter allowing readers to replicate examples on their own

Exploratory Factor Analysis W. Holmes Finch, 2019-09-05 A firm knowledge of factor analysis is key to understanding much published research in the social and behavioral sciences Exploratory Factor Analysis by W Holmes

Finch provides a solid foundation in exploratory factor analysis EFA which along with confirmatory factor analysis represents one of the two major strands in this field The book lays out the mathematical foundations of EFA explores the range of methods for extracting the initial factor structure explains factor rotation and outlines the methods for determining the number of factors to retain in EFA The concluding chapter addresses a number of other key issues in EFA such as determining the appropriate sample size for a given research problem and the handling of missing data It also offers brief introductions to exploratory structural equation modeling and multilevel models for EFA Example computer code and the annotated output for all of the examples included in the text are available on an accompanying website [Linear Regression](#)

Generalized Linear Models for Bounded and Limited Quantitative Variables Michael Smithson, Yiyun Shou, 2019-09-09

This book introduces researchers and students to the concepts and generalized linear models for analyzing quantitative random variables that have one or more bounds Examples of bounded variables include the percentage of a population eligible to vote bounded from 0 to 100 or reaction time in milliseconds bounded below by 0 The human sciences deal in many variables that are bounded Ignoring bounds can result in misestimation and improper statistical inference Michael Smithson and Yiyun Shou's book brings together material on the analysis of limited and bounded variables that is scattered across the literature in several disciplines and presents it in a style that is both more accessible and up to date The authors provide worked examples in each chapter using real datasets from a variety of disciplines The software used for the examples include
