

Problem 2.5. Show that if X is finite and $\succsim$ is a rational preference relation on X , then there is a utility function $u : X \rightarrow \mathbb{R}$ that represents $\succsim$.

Proof. Induct on the number N of the elements of X .

If $N = 1$, there must exist a utility function.

If $N > 1$, write $X = \{x_1, x_2, x_3, \dots, x_N\}$,

Firstly, assume that there is no indifference between two different elements of X , then we assume that there has already existed a utility function

representing $\succsim$ on $\{x_1, x_2, x_3, \dots, x_{N-1}\}$, we also assume that $u(x_1) > u(x_2) > u(x_3) > \dots > u(x_{N-1})$. Then the following three cases will happen:

1. For every $i < N$, $x_N \succ x_i$.
2. For every $i < N$, $x_i \succ x_N$.
3. There exists $i < N$ and $j < N$, such that $x_i \succ x_N \succ x_j$.

For 1. we can have $u(x_N) > u(x_1)$, then there exists a utility function $u(\cdot)$ representing $\succsim$ on the whole X .

For 2. we can have $u(x_N) < u(x_{N-1})$, then there exists a utility function $u(\cdot)$ representing $\succsim$ on the whole X .

For 3. we can have $X_i = \{x_{i \in \{1, 2, 3, \dots, i\}} \succ x_N\}$ and $X_j = \{x_N \succ x_{j \in \{j, j+1, \dots, N-1\}}\}$, then let $i = j+1$, surely $u(x_i) = u(x_{j+1}) = \min\{u(x_1), u(x_2), u(x_3), \dots, u(x_i)\}$

Identification of novel modulators towards high cell density and high-producing Chinese hamster ovary suspension cell cultures as well as their application in biopharmaceutical protein production Beat Thalmann, 2015-08-28 Amongst the mammalian producer cell lines the Chinese hamster ovary CHO cell lines are of predominant importance in biopharmaceutical production Thus novel factors increasing overall productivity are sought and

bear the potential to reduce the unit costs of a production process Furthermore the current patent situation for several therapeutic proteins demands innovative tools to at least maintain or preferentially increase the cost effectiveness of their production processes In this thesis hitherto unknown factors were revealed by next generation sequencing of chemically mutated and selected CHO K1 suspension cell lines Two factors were proven to improve CHO based production processes cgrSnord78 and cgrTtc36 The Cricetulus griseus Ttc36 increases the integral as well as the maximal viable cell density and abolishes the cell cell aggregation whilst cgrSnord78 improves the specific as well as volumetric productivity without significant impact on cell growth Based on the present results and discussion foundations for future research on these functionally unrevealed factors are laid Hence this work represents the first step towards the application of the genuine biomolecules cgrTtc36 and cgrSnord78 in biopharmaceutical protein production

Molecular Analyses Scott Orland Rogers, 2022-07-11 DNA and RNA extraction methods from a variety of tissues and samples are now routine including extraction from single cells Many methods are now automated Sequencing efficiency has reached the point where it is now possible to obtain gigabases of data both quickly and inexpensively Such methods permit the identification of gene versions including those associated with disease e g small nucleotide polymorphism analyses or SNPs The general public as well as clinicians can now access a wide variety of literature on the molecular bases of diseases allowing them to better assess disease risks and treatments This volume concentrates on medically focused methods and therefore the major audience will be medical professionals students and those involved in medically related research endeavors There are also papers in this volume dealing specifically with methods developed to analyze large sequence data sets Many methods reviewed herein are more broadly applicable to other fields in biology chemistry bioinformatics and bioengineering and are intended for a broad readership

Gram-positive phages: From isolation to application Jennifer Mahony,Douwe van Sinderen,2015-05-15 Phage biology is one of the most significant and fundamental aspects of biological research and is often used as a platform for model studies relating to more complex biological entities For this reason phage biology has enjoyed focused attention and significant advances have been made in the areas of phage genomics transcriptomics and the development and characterisation of phage resistance mechanisms In recent years considerable research has been performed to increase our understanding of the interactions of these phages with their hosts using genomic biochemical and structural approaches Such multidisciplinary approaches are core to developing a full understanding of the processes that govern phage infection information that may be harnessed to develop anti phage strategies that may be applied in food fermentations or applied in a

positive sense in phage therapy applications The co evolutionary processes of these phages and their hosts have also been a considerable focus of research in recent years Such data has promoted a deeper understanding of the means by which these phages attach to and infect their hosts and permitted the development of effective anti phage strategies Furthermore the presence and activity of host encoded phage resistance systems that operate at various stages of the phage cycle and the potential for the application of such systems consolidates the value of research in this area Conversely phages and their components have been applied as therapeutic agents against a number of pathogens including among others *Clostridium difficile* *Lactococcus garviae* *Mycobacterium* spp *Listeria* spp and the possibilities and limitations of these systems will be explored in this topic Additionally phage therapeutic approaches have been applied to the prevention of development of food spoilage organisms in the brewing and beverage sectors and exhortate the positive applications of phages in the industrial setting This research topic is aimed to address the most current issues as well as the most recent advances in the research of phages infecting Gram positive bacteria covering areas such as phages in food fermentations their impact in industry phage ecology genomics evolution structural analysis phage host interactions and the application of phages and components thereof as therapeutic agents against human and animal pathogens **Kempe's Engineer's Year-book** ,1996
