Stem Cell Bioprocessing and Manufacturing Joaquim M. S. Cabral, Cláudia Lobato da Silva, Maria Margarida Diogo, 2021-01-20 The next healthcare revolution will apply regenerative medicines using human cells and tissues The aim of the regenerative medicine approach is to create biological therapies or substitutes in vitro for the replacement or restoration of tissue function in vivo lost through failure or disease However whilst science has revealed the potential and early products have shown the power of such therapies there is an immediate and long term need for expertise with the necessary skills to face the engineering and life science challenges before the predicted benefits in human healthcare can be realized Specifically there is a need for the development of bioprocess technology for the successful transfer of laboratory based practice of stem cell and tissue culture to the clinic as therapeutics through the application of engineering principles and practices This Special Issue of Bioengineering on Stem Cell Bioprocessing and Manufacturing addresses the central role in defining the engineering sciences of cell based therapies by bringing together contributions from worldwide experts on stem cell biology and engineering bioreactor design and bioprocess development scale up and manufacturing of stem cell based therapies

Diseases of the Salivary Glands Margherita Sisto, 2021-04-09 A large number of diseases affect salivary gland SG secretion through different mechanisms leading to SG dysfunction and associated oral problems The glands may suffer from viral bacterial and albeit rarely fungal infections which may cause painful swelling or obstruction they could also become the target of an autoimmune attack or may be affected by various benign and malignant tumors which consist of a heterogeneous group of lesions with complex clinical pathological characteristics The loss of normal SG function results in widespread deterioration of oral health This book entitled Diseases of Salivary Glands provides an overview of recent advances in the field of SG disorders focusing on the cellular and molecular mechanisms involved in the pathogenesis of SG diseases and on the most innovative investigation techniques that could help to preserve patients health function and quality of life

Organizational and DS Maintenance Manual for Survival Kits Army Aricraft , 1966 Stem Cell-Based Neural Model Systems for Brain Disorders Yu-Wen Alvin Huang, ChangHui Pak, 2023-06-10 This detailed volume presents validated and well adapted procedures involving humanized and or stem cell based neural model systems that have proven helpful in better understanding the essential brain functions involved in the pathogenesis of brain disorders The book explores the generation of multiple neural cell types in 2D and 3D as well as cutting edge techniques to assay neural function Written for the highly successful Methods in Molecular Biology series chapters include introductions to their respective topics lists of the necessary materials and reagents step by step and readily reproducible laboratory protocols and tips on troubleshooting and avoiding known pitfalls Authoritative and practical Stem Cell Based Neural Model Systems for Brain Disorders serves as an essential resource for researchers and students in neuroscience stem cell biology and related fields

Nucleic Acids and Molecular Biology Fritz Eckstein, David M. J. Lilley, 2012-12-06 Molecular biology is one of the most rapidly developing

and at the same time most exciting disciplines The key to molecular biology lies in the understanding of nucleic acids their structure function and interaction with proteins Nucleic Acids and Molecular Biology keeps scientists informed of the explosively growing information and complies with the great interest in this field by offering a continued high standard of review A substantial part of this volume has been devoted to the analysis of different aspects of nucleic acid protein interactions including RNA protein interaction

Lishko, 2022-08-29 **Recent Advances in iPSC Disease Modeling** Alexander Birbrair, 2020-07-16

Recent Advances in iPSC Disease Modeling Volume One addresses how induced pluripotent stem cells can be used to model various diseases. This new volume teaches readers about current advances in the field describing the use of induced pluripotent stem cells to model several diseases in vitro and thus enabling us to study the cellular and molecular mechanisms involved in different pathologies. Further insights into these mechanisms will have important implications for our understanding of disease appearance, development and progression. The volume is written for researchers and scientists in stem cell therapy, cell biology, regenerative medicine and organ transplantation specialists. In recent years, remarkable progress has been made in the obtention of induced pluripotent stem cells and their differentiation into several cell types, tissues and organs using state of art techniques. Hence, these advantages have facilitated the identification of key targets and further defining on the molecular basis of several disorders. Provides an overview on the fast moving field of induced pluripotent stem cell technology, regenerative medicine and therapeutics. Covers the following diseases: severe congenital neutropenia, sickle cell and Diamond-Blackfan anemias, muscular dystrophies, Bernard-Soulier syndrome, familial hypercholesterolemia, type II A Werner syndrome, lysosomal storage diseases and more. Contains descriptions of cutting edge research on the development of disease specific human pluripotent stem cells.
