ARTIFICIAL INTELLIGENCE IN HEALTHCARE:

ADVANTAGES AND DISADVANTAGES Amit Vyas,Varun Dixit,Davinderjit Kaur,Dr. Haewon Byeon,2023-08-21 Homo sapiens have always had the goal of finding a means to upgrade and improve their living situations in a manner that is in line with how they see life This is parallel to the history of our ancestors which covers a thousand miles beginning with the caveman who struggled only to find food and finishing with the voyage that embarked upon the greatest blessing as the evolution of the human mind to critically analyze the environment and surrounding The journey began with the caveman and ended with the evolution of the human mind to critically analyze the environment and surrounding The concept of Artificial Intelligence AI has allowed mankind to leap into an environment that is entirely diversified and imaginative This is an environment in which we can separate the typical industrial revolution from the dilemma of the information technology revolution A computerized information technology based system that is capable of doing many activities simultaneously in order to integrate a large number of algorithmic pieces of data and consult with either built in or internet data bases in order to provide you with answers to your questions When we talk about artificial intelligence we are referring to the following 3 At this point in time artificial intelligence has permeated every imaginable facet of our existence resulting in an abundance of time saving inventions and straightforward answers to issues that were previously intractable As a direct consequence of this

our lives have been forced into comfort zones that are apparently more pleasurable The newly found corporate empire that is healthcare is quickly getting connected with information technology on an ever increasing scale across all of its domains This is not just true for the healthcare industry but certainly for other fields as well When it comes to addressing AI in healthcare it appears that a situation that is very similar to the one that arises when discussing any new notion or concept This is something that is always important for a productive dialogue and progress However as of right now there is a little stronger lean toward the latter group than there is towards the former group

1 Page Equipment that interacts with hospital information and management systems will simply take in all of the data based on the clinical presentation and will provide you with beepers flashers and changing color codes to alert you to issues about patients in real time Not only has the movement of data between and within departments become far quicker than it was in the past but the machinery that interacts with these systems also gives you access to the data in real time The next stage was to supply the treating physicians with an algorithmic method that would aid in the interpretation of the data At the same time the material was going to be provided to consultants and the necessary data repositories so that it could be better understood In a word the purpose of this cutting edge human machine interface was to facilitate the management of the most optimal medical judgments that could possibly be made Not only does the system prevent the laborious entering of data but it also has the potential to provide feedback to interventions along with a time line This is all made possible by the system's use of barcodes In the case that a mistake was made this helps to reduce the number of comments that need to be made which can be verbally conflicting and take up a lot of time
